

Integrity Response Escalation Module (IRESM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IRS-IRESM-2026-07-21-0004

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Response Standard (IRS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Response Escalation

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Response Escalation

Canonical Definition

Integrity Response Escalation Module (IRESM) defines the governance framework for escalating integrity response activities when predefined governance conditions, severity thresholds, operational risks, or decision authorities require higher levels of intervention. It establishes the escalation criteria, approval mechanisms, communication pathways, accountability requirements, and governance controls required to ensure that escalation occurs consistently, transparently, and under controlled governance throughout the complete lifecycle of a governed entity.

Operational Role

IRESM governs the escalation layer of integrity response management by ensuring that integrity response activities are elevated to the appropriate governance level whenever predefined escalation conditions are met.

Minimum Implementation Framework

1. Define Escalation Criteria

Identify the governance conditions, severity thresholds, operational risks, decision conflicts, regulatory obligations, and emergency situations that require escalation.

2. Define Escalation Methodology

Establish standardized escalation procedures, authority levels, approval workflows, communication channels, notification requirements, and governance responsibilities.

3. Define Escalation Validation Logic

Define how escalation decisions are evaluated for necessity, proportionality, timeliness, accountability, evidence sufficiency, and compliance with the approved governance methodology.

4. Define Governance Response

Establish governance actions for successful escalations, failed escalations, delayed escalations, authority conflicts, emergency overrides, and executive intervention.

5. Preserve Escalation Records

Maintain escalation requests, approvals, decisions, communications, supporting evidence, timelines, governance actions, and audit documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An integrity breach expands beyond the authority of the operational response team and begins affecting multiple autonomous AI environments.

Application

IRESM escalates the response to executive governance, activates predefined emergency governance procedures, and coordinates cross-domain decision-making.

Result

The integrity response remains governed as operational complexity increases, ensuring timely executive oversight and coordinated intervention.

Use Case 2 — National Critical Infrastructure

Scenario

A verified integrity breach spreads across multiple interconnected utility operators, creating a national operational risk.

Application

IRESM governs the escalation from local operational management to national crisis coordination, regulatory authorities, and executive leadership.

Result

Escalation occurs through predefined governance procedures, preserving accountability, transparency, and coordinated operational control.

Canonical Closing Statement

Integrity Response Escalation Module establishes the canonical governance framework for escalating integrity response activities through controlled, accountable, transparent, and auditable governance procedures. It ensures that every escalation occurs at the appropriate authority level, under approved governance conditions, and with complete operational accountability throughout the complete lifecycle of every governed entity.
