

Integrity Restoration Execution Module (IREXM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IRRS-IREXM-2026-07-21-0002

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Restoration Standard (IRRS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Restoration Execution

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Restoration Execution

Canonical Definition

Integrity Restoration Execution Module (IREXM) defines the governance framework for executing approved integrity restoration activities following a verified integrity breach. It establishes the execution procedures, operational controls, recovery actions, accountability mechanisms, monitoring requirements, and governance safeguards required to restore approved integrity conditions consistently, effectively, and under controlled governance throughout the complete lifecycle of a governed entity.

Operational Role

IREXM governs the execution layer of integrity restoration by ensuring that every approved restoration activity is performed according to the authorized restoration plan, monitored continuously, and documented under accountable governance.

Minimum Implementation Framework

1. Define Restoration Execution Requirements

Identify the approved restoration activities, operational priorities, responsible entities, resource allocations, dependencies, and governance conditions required for restoration execution.

2. Define Restoration Execution Methodology

Establish standardized execution procedures, operational workflows, recovery sequencing, governance checkpoints, monitoring activities, and execution controls.

3. Define Execution Validation Logic

Define how restoration activities are evaluated for effectiveness, completeness, consistency, timeliness, governance compliance, and successful re-establishment of approved integrity conditions.

4. Define Governance Response

Establish governance actions for execution failures, incomplete restoration activities, unexpected operational conditions, resource conflicts, corrective interventions, and escalation requirements.

5. Preserve Execution Records

Maintain restoration logs, execution evidence, governance approvals, operational records, corrective actions, monitoring results, timestamps, and audit documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform has completed breach response and received approval to begin integrity restoration under an authorized recovery plan.

Application

IREXM governs the execution of approved restoration activities, monitors recovery progress, coordinates operational actions, and documents every restoration step until approved integrity conditions are re-established.

Result

Integrity restoration is executed consistently under controlled governance, ensuring reliable recovery and complete operational accountability.

Use Case 2 — Healthcare Information Systems

Scenario

A hospital restores clinical information systems after successfully containing

a verified integrity breach.

Application

IREXM governs the execution of restoration procedures, coordinates technical recovery, validates operational readiness, and records all recovery activities according to approved governance requirements.

Result

Healthcare operations return to normal through a controlled, transparent, and fully auditable integrity restoration process that minimizes operational risk and preserves patient safety.

Canonical Closing Statement

Integrity Restoration Execution Module establishes the canonical governance framework for executing approved integrity restoration activities through controlled, accountable, transparent, and auditable operational actions. It ensures that restored integrity is achieved consistently and in accordance with approved governance conditions throughout the complete lifecycle of every governed entity.
