

Integrity Restoration Planning Module (IRPM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IRRS-IRPM-2026-07-21-0001

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Restoration Standard (IRRS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Restoration Planning

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Restoration Planning

Canonical Definition

Integrity Restoration Planning Module (IRPM) defines the governance framework for planning integrity restoration following a verified integrity breach and completed response activities. It establishes the planning principles, restoration objectives, recovery priorities, resource requirements, validation criteria, and governance controls required to prepare a structured, accountable, and auditable restoration process throughout the complete lifecycle of a governed entity.

Operational Role

IRPM governs the planning layer of integrity restoration by ensuring that restoration activities are systematically designed, prioritized, approved, and aligned with the organization's governance objectives before restoration execution begins.

Minimum Implementation Framework

1. Define Restoration Planning Requirements

Identify the integrity conditions to be restored, recovery objectives, affected operational domains, resource requirements, dependencies, and governance priorities.

2. Define Restoration Planning Methodology

Establish standardized planning procedures, restoration milestones, role assignments, approval mechanisms, timelines, and governance checkpoints.

3. Define Planning Validation Logic

Define how restoration plans are evaluated for completeness, feasibility, consistency, governance compliance, operational effectiveness, and alignment with approved restoration objectives.

4. Define Governance Response

Establish governance actions for incomplete restoration plans, planning conflicts, resource limitations, changing operational conditions, approval failures, and escalation requirements.

5. Preserve Planning Records

Maintain restoration plans, governance approvals, planning assumptions, dependencies, resource allocations, revisions, supporting evidence, and audit documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

Following a verified integrity breach, an autonomous AI platform requires a structured restoration plan before production services can safely resume.

Application

IRPM defines restoration objectives, prioritizes recovery activities, allocates governance responsibilities, establishes validation milestones, and prepares the approved restoration roadmap.

Result

Integrity restoration begins through a controlled, accountable, and well-governed plan that minimizes operational uncertainty.

Use Case 2 — Financial Services Recovery

Scenario

A banking institution must restore operational integrity after containing a breach affecting transaction processing systems.

Application

IRPM coordinates restoration planning across operational teams, governance authorities, compliance functions, and technical specialists before recovery activities commence.

Result

The organization executes restoration according to an approved governance plan supported by documented priorities, validated objectives, and complete accountability.

Canonical Closing Statement

Integrity Restoration Planning Module establishes the canonical governance framework for preparing integrity restoration through structured planning, approved governance objectives, validated recovery strategies, and accountable decision-making. It ensures that every restoration activity begins with a controlled, transparent, and fully auditable governance plan throughout the complete lifecycle of every governed entity.
