

Integrity Restoration Validation Module (IRVM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IRRS-IRVM-2026-07-21-0003

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Restoration Standard (IRRS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Restoration Validation

Version: 1.0

Status: Canonical · Open Module

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Restoration Validation

Canonical Definition

Integrity Restoration Validation Module (IRVM) defines the governance framework for validating that integrity has been successfully restored following approved restoration activities. It establishes the validation criteria, evidence requirements, verification methods, acceptance conditions, and governance controls required to confirm that approved integrity conditions have been objectively re-established before the governed entity proceeds to continuous integrity assurance.

Operational Role

IRVM governs the validation layer of integrity restoration by ensuring that no restoration is considered complete until restored integrity has been objectively verified, documented, approved, and supported by sufficient governance evidence.

Minimum Implementation Framework

1. Define Restoration Validation Requirements

Identify the integrity conditions, validation criteria, acceptance thresholds, evidence requirements, responsible validators, and governance objectives required to confirm successful restoration.

2. Define Validation Methodology

Establish standardized validation procedures, testing methods, verification activities, review processes, approval workflows, and governance checkpoints.

3. Define Validation Logic

Define how restored integrity is evaluated for completeness, effectiveness, consistency, operational readiness, governance compliance, and conformity with approved restoration objectives.

4. Define Governance Response

Establish governance actions for failed validation, partial restoration, insufficient evidence, validation disputes, corrective restoration activities, revalidation, and escalation where required.

5. Preserve Validation Records

Maintain validation reports, supporting evidence, governance approvals, testing results, corrective actions, acceptance decisions, timestamps, and audit documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform completes all approved restoration activities after a verified integrity breach and requests authorization to resume unrestricted operation.

Application

IRVM validates restored governance conditions, verifies operational integrity, reviews supporting evidence, and confirms that all approved restoration objectives have been successfully achieved.

Result

Autonomous operations resume only after integrity restoration has been objectively validated through documented governance evidence.

Use Case 2 — National Financial Infrastructure

Scenario

A central payment infrastructure completes restoration following a major

integrity breach affecting transaction processing.

Application

IRVM validates restored operational integrity, confirms compliance with governance requirements, reviews recovery evidence, and authorizes the transition to continuous integrity assurance.

Result

Critical financial services resume under verified integrity conditions supported by objective validation, governance approval, and complete auditability.

Canonical Closing Statement

Integrity Restoration Validation Module establishes the canonical governance framework for objectively validating restored integrity through standardized verification, accountable governance, documented evidence, and auditable approval. It ensures that integrity restoration is accepted only when approved integrity conditions have been demonstrably re-established throughout the complete lifecycle of every governed entity.
