

Integrity Scoring Module (ISM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IMS-ISM-2026-07-17-0005

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Integrity Measurement Standard (IMS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Integrity Scoring

Version: 1.0

Status: Canonical · Open Module

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Scoring

Canonical Definition

Integrity Scoring Module (ISM) defines the governance framework for converting integrity measurements and evaluation results into standardized integrity scores. It establishes the scoring models, calculation methods, weighting principles, and classification rules required to represent integrity consistently throughout the complete lifecycle of a governed entity.

Operational Role

ISM governs the scoring layer of integrity measurement by transforming evaluated integrity into standardized numerical or categorical scores that enable comparison, benchmarking, reporting, monitoring, and governance decision-making.

Minimum Implementation Framework

1. Define Integrity Scoring Model

Establish the scoring methodology, score ranges, weighting factors, aggregation methods, and classification model used to represent integrity.

2. Define Scoring Requirements

Define the governance rules for score calculation, normalization, weighting, comparability, repeatability, and consistency across all governed entities.

3. Define Score Validation Logic

Define how integrity scores are verified for calculation accuracy, methodological consistency, evidence completeness, and governance compliance before acceptance.

4. Define Governance Response

Establish governance actions associated with each scoring level, including monitoring, escalation, corrective action, re-evaluation, certification, or operational restrictions.

5. Preserve Scoring Records

Maintain scoring methodologies, calculation models, weighting revisions, historical scores, governance approvals, benchmarking results, and supporting evidence throughout the complete lifecycle.

Example Use Cases

Use Case 1 — AI Governance Certification

Scenario

An AI provider assigns integrity scores to deployed AI systems based on governance compliance, operational reliability, audit evidence, and policy adherence.

Application

ISM applies a standardized scoring model to convert integrity evaluations into comparable governance scores.

Result

Every AI system receives an objective integrity score that supports certification, benchmarking, procurement, and continuous governance monitoring.

Use Case 2 — Supply Chain Governance

Scenario

A global manufacturer evaluates suppliers using integrity measurements covering compliance, quality, traceability, security, and operational

reliability.

Application

ISM converts these evaluation results into standardized supplier integrity scores used for procurement and ongoing governance oversight.

Result

Supplier integrity can be compared objectively across the entire supply chain using consistent governance scoring.

Canonical Closing Statement

Integrity scoring transforms governance evaluation into an objective and comparable representation of integrity. Integrity Scoring Module establishes the canonical framework for calculating, classifying, and governing integrity scores, enabling consistent benchmarking, transparent reporting, and evidence-based governance throughout the complete lifecycle of every governed entity.
