

# Integrity State Monitoring Module (ISMM)

**OOF™ Origin Open Foundation™**

Independent Methodological Authority

**OriginID:** OOF-OID-INTEGROS-ISS-ISMM-2026-07-21-0004

**Architecture Ecosystem:** Structured Reality Standards™

**Architecture Family:** INTEGROS® — Integrity Governance Architecture

**Parent Standard:** Integrity State Standard (ISS)

**Operational Layer:** Meta-Integrity Governance Layer

**Category:** Governance & Enforcement

**Subcategory:** Integrity Governance

**Type:** Parent Standard Module

**Governed Space:** Integrity State Monitoring

**Version:** 1.0

**Status:** Canonical · Open Module

**Origin Date:** 21 July 2026

**Compatibility:** OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

**AI-Readable:** Yes

**Authority:** OOF®

**Protection:** MIP™ — Methodological Intellectual Property

**Canonical Language:** English (UCL)

## Governed Space

Integrity State Monitoring

---

## Canonical Definition

Integrity State Monitoring Module (ISMM) defines the governance framework for continuously observing, tracking, and supervising the operational state of integrity. It establishes the monitoring mechanisms, observation criteria, reporting rules, and governance controls required to detect integrity state changes and maintain continuous awareness throughout the complete lifecycle of a governed entity.

---

## Operational Role

ISMM governs the monitoring layer of integrity state management by providing continuous visibility into the current integrity state and detecting changes that may require governance intervention.

---

## Minimum Implementation Framework

---

## 1. Define Monitoring Scope

Identify the integrity states, operational activities, governance events, measurements, and environmental conditions that require continuous monitoring.

## 2. Define Monitoring Requirements

Establish monitoring frequency, observation methods, reporting intervals, alert thresholds, evidence collection requirements, and governance responsibilities.

## 3. Define Monitoring Validation Logic

Define how monitoring results are verified for accuracy, completeness, timeliness, consistency, and compliance with approved governance methodology.

## 4. Define Governance Response

Establish governance actions for detected state changes, monitoring alerts, abnormal conditions, missing observations, escalations, and corrective interventions.

## 5. Preserve Monitoring Records

Maintain monitoring logs, state histories, alerts, evidence, governance decisions, observation reports, and audit documentation throughout the complete lifecycle.

---

## Example Use Cases

### Use Case 1 — Autonomous AI Operations

#### Scenario

An autonomous AI platform continuously operates across multiple business environments where integrity conditions may change in real time.

#### Application

ISMM continuously monitors the integrity state, detects changes, generates governance alerts, and supports timely operational oversight.

#### Result

Integrity remains continuously observable, enabling rapid governance responses before operational risks escalate.

### Use Case 2 — Industrial Control System

#### Scenario

A manufacturing facility continuously monitors the integrity of production systems, safety controls, and operational processes.

## Application

ISMM supervises integrity states in real time and identifies operational changes that require governance review or intervention.

## Result

Continuous integrity monitoring improves operational reliability, reduces governance blind spots, and supports proactive integrity management.

---

## Canonical Closing Statement

Integrity governance requires continuous awareness, not periodic observation. Integrity State Monitoring Module establishes the canonical framework for continuously monitoring integrity states, enabling early detection of operational changes, timely governance intervention, and sustained integrity throughout the complete lifecycle of every governed entity.

---

# OOF® MIP® Protection Notice
