

Integrity Condition Standard (ICS)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-ICS-2026-07-17-0003

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard

Governed Space: Integrity Conditions

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Conditions

Core Question

Which conditions must remain true for integrity to exist?

Canonical Definition

Integrity Condition Standard (ICS) defines the mandatory governance conditions that must remain continuously satisfied for a governed entity to preserve its integrity throughout its complete lifecycle. It establishes the governing rules, constraints, dependencies, and operational conditions under which integrity remains valid, measurable, and governable.

Governance Flow Position

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

Standard Abstract

A defined integrity model and a structurally sound architecture alone do not guarantee that integrity will be preserved. Integrity exists only while specific governance conditions continue to be satisfied.

Building upon the structural foundation established by STIS, Integrity Condition Standard defines the mandatory conditions required for integrity to remain valid throughout the governed lifecycle.

ICS establishes these mandatory governance conditions and provides the operational foundation upon which integrity can later be measured, monitored, evaluated, and protected.

When one or more mandatory conditions cease to exist, integrity enters a governable state of degradation that can subsequently be detected, classified, and managed by later standards within INTEGROS®.

Operational Role

Integrity Condition Standard governs the mandatory conditions required to preserve integrity. It establishes the governance rules that determine whether integrity remains continuously valid before integrity is measured, classified, or evaluated.

Operational Space

ICS governs:

- integrity conditions
- governance constraints
- integrity rules
- dependency conditions
- boundary conditions
- operational validity
- integrity prerequisites.

This governed space ensures that integrity is maintained through continuously satisfied governance conditions rather than assumptions.

Why This Standard Exists

Integrity is not maintained simply because it has been defined or supported by an appropriate structure.

It remains valid only while its governing conditions continue to exist.

ICS exists because Integrity Conditions represent the third governed space of INTEGROS® — Integrity Governance Architecture, establishing the mandatory governance requirements that preserve integrity before measurement and state evaluation begin.

Scope

This standard may be applied across:

- AI systems
- autonomous systems
- organizational governance
- digital identities
- digital assets
- operational processes
- software systems
- cognitive systems
- governance frameworks
- any governed entity requiring integrity governance.

Relationship to Other OOF® Architectures

ICS governs the governance conditions that preserve integrity.

It interoperates with:

- GOA™ for governance rules
- OBIDENTITY® for identity integrity conditions
- ART™ for evidence supporting integrity conditions
- ORA™ for operational conditions
- AGA™ for accountability conditions
- AIG® for behavioral conditions
- CLIA® for cognitive conditions
- MGIA™ for memory conditions
- ASGA™ for autonomous system operating conditions.

Together these architectures ensure that integrity remains continuously governed through explicitly defined conditions across every governed domain.

Foundational Principle

Integrity exists only while its governing conditions remain true. When mandatory integrity conditions are no longer satisfied, integrity begins to degrade regardless of the underlying structure.

Canonical Closing Statement

Integrity Condition Standard establishes the mandatory governance conditions required for integrity to remain continuously valid. By governing the rules, constraints, dependencies, and operational requirements that preserve integrity, ICS provides the essential bridge between structural integrity and measurable integrity throughout the complete lifecycle of every governed entity.
