

Integrity Definition Standard (INDS)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-INDS-2026-07-17-0001

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard

Governed Space: Integrity Definition

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Definition

Core Question

What defines integrity?

Canonical Definition

Integrity Definition Standard (INDS) defines the structural conditions under which the meaning of integrity is formally established for any governed entity, enabling integrity to be consistently identified, interpreted, measured, governed, and independently verified throughout its complete lifecycle.

INDS governs integrity definition.

The standard establishes the canonical governance conditions required to determine what integrity means before integrity can be measured, evaluated, protected, restored, or assured.

Integrity cannot be governed until integrity has been defined.

INDS establishes that foundation.

Governance Flow Position

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

Standard Abstract

Every governed entity depends upon integrity.

However, integrity cannot be evaluated unless its meaning is explicitly defined.

Different domains often interpret integrity differently.

This creates inconsistency, ambiguity, and incompatible governance decisions.

INDS establishes a canonical integrity definition before any governance activity begins.

It serves as the foundational layer upon which every subsequent integrity governance activity depends.

Operational Role

Integrity Definition Standard provides the governance layer responsible for defining the canonical meaning of integrity for any governed entity.

Its role is to establish the structural governance foundation that enables all subsequent integrity governance processes to operate consistently.

Operational Space

INDS governs:

- integrity definition
- integrity meaning
- integrity boundaries
- integrity criteria
- integrity context
- integrity scope
- integrity interpretation
- integrity governance foundation.

This governed space ensures that integrity possesses one formally governed meaning before measurement, evaluation, restoration, or assurance occur.

Why This Standard Exists

Integrity cannot be measured if it has never been defined.

It cannot be protected if its governing conditions remain unknown.

It cannot be restored if no reference state exists.

INDS exists because Integrity Definition represents the first governable space of INTEGROS® — Integrity Governance Architecture.

Scope

This standard may be applied across:

- AI systems
 - autonomous systems
 - human organizations
 - digital identities
 - digital assets
 - operational processes
 - governance frameworks
 - cognitive systems
 - software systems
 - any governed entity requiring integrity governance.
-

Relationship to Other OOF® Architectures

INDS governs the definition of integrity.

It interoperates with:

- GOA™ for governance structure
- OBIDENTITY® for identity integrity
- ART™ for audit evidence
- ORA™ for operational integrity
- AGA™ for accountability integrity
- AIG® for behavioral integrity
- CLIA® for cognitive integrity
- MGIA™ for memory integrity
- ASGA™ for autonomous system integrity.

Together these architectures ensure that integrity is consistently defined before it is governed within each operational domain.

Foundational Principle

Integrity begins with definition. A governed entity cannot preserve, measure, restore, or demonstrate integrity until the meaning of integrity has been formally established.

Canonical Closing Statement

Integrity is not created by measurement or verification. It begins with a shared definition. Integrity Definition Standard establishes the canonical governance foundation upon which every subsequent integrity decision, evaluation, restoration, and assurance process depends throughout the complete lifecycle of any governed entity.
