

Integrity Measurement Standard (IMS)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IMS-2026-07-17-0004

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard

Governed Space: Integrity Measurement

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Measurement

Core Question

How is integrity measured?

Canonical Definition

Integrity Measurement Standard (IMS) defines the governance conditions required to measure integrity by establishing objective metrics, indicators, thresholds, evaluation models, and scoring mechanisms that quantify the integrity of a governed entity throughout its complete lifecycle.

Governance Flow Position

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

Standard Abstract

Integrity cannot be governed objectively unless it can be measured consistently.

Definitions establish what integrity means, structures preserve it, and conditions determine when it remains valid. However, governance decisions require objective evidence rather than subjective judgment.

Building upon the integrity conditions established by ICS, Integrity Measurement Standard defines how integrity is objectively measured and evaluated.

IMS transforms integrity from a conceptual governance principle into measurable operational reality through standardized metrics and evaluation methods.

Operational Role

Integrity Measurement Standard governs the objective measurement of integrity. It establishes the governance framework used to quantify integrity consistently across different entities, operational environments, and lifecycle stages.

Operational Space

IMS governs:

- integrity metrics
- integrity indicators
- measurement models
- evaluation methods
- integrity thresholds
- integrity scoring
- measurement consistency.

This governed space ensures that integrity can be measured objectively, compared consistently, and evaluated independently.

Why This Standard Exists

Integrity cannot be effectively governed through assumptions or subjective interpretation.

Without objective measurement, organizations cannot determine whether integrity is improving, degrading, stable, or compromised.

IMS exists because Integrity Measurement represents the fourth governed space of INTEGROS® — Integrity Governance Architecture, providing the objective governance foundation required before integrity states, deviations, and breaches can be identified.

Scope

This standard may be applied across:

- AI systems
- autonomous systems
- organizational governance
- digital identities
- digital assets
- operational processes
- software systems
- cognitive systems
- governance frameworks
- any governed entity requiring measurable integrity.

Relationship to Other OOF® Architectures

IMS governs the measurement layer of integrity.

It interoperates with:

- GOA™ for governance measurements
- OBIDENTITY® for identity integrity measurement
- ART™ for measurement evidence
- ORA™ for operational measurements
- AGA™ for accountability measurements
- AIG® for behavioral measurements
- CLIA® for cognitive measurements
- MGIA™ for memory measurements
- ASGA™ for autonomous system measurements.

Together these architectures ensure that integrity is measured consistently across every governed domain.

Foundational Principle

Integrity can only be governed objectively when it can be measured consistently. Objective measurement transforms integrity from a defined condition into observable operational reality.

Canonical Closing Statement

Integrity Measurement Standard establishes the governance framework required to measure integrity objectively and consistently. By governing metrics, indicators, thresholds, evaluation models, and scoring mechanisms, IMS provides the measurable foundation upon which integrity states, deviations, breaches, restoration, and assurance are built throughout the complete lifecycle of every governed entity.
