

Integrity Response Standard (IRS)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IRS-2026-07-21-0008

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard

Governed Space: Integrity Response

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Response

Core Question

How should a governed entity respond once an integrity breach has been verified?

Canonical Definition

Integrity Response Standard (IRS) defines the governance conditions required to authorize, coordinate, execute, monitor, document, and govern responses to verified integrity breaches. It establishes the response principles, operational procedures, accountability requirements, escalation mechanisms, communication rules, and governance controls required to contain integrity failures, minimize operational impact, and preserve governance continuity throughout the complete lifecycle of a governed entity.

Governance Flow Position

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

Standard Abstract

Recognizing an integrity breach alone is not sufficient.

Once a breach has been verified, governance must transition from detection to controlled operational action. Every response must be timely, proportionate, accountable, transparent, and fully auditable to prevent further integrity degradation and protect the governed entity.

Building upon the verified integrity breaches established by IBS, Integrity Response Standard defines how governed entities respond to integrity failures before restoration activities begin.

IRS transforms operational reaction into a standardized governance process supported by documented authority, controlled execution, and objective accountability.

Operational Role

Integrity Response Standard governs the execution and management of integrity responses. It establishes the governance framework required to authorize response activities, coordinate operational actions, contain integrity failures, manage escalation, communicate with stakeholders, and document response execution under controlled governance.

Operational Space

IRS governs:

- response authorization
- response coordination
- response execution
- containment
- escalation
- stakeholder communication
- response documentation.

This governed space ensures that every verified integrity breach is managed through a consistent, accountable, transparent, and auditable governance response across all operational environments.

Why This Standard Exists

A verified integrity breach requires more than recognition—it requires governed action.

Without standardized response governance, organizations risk inconsistent decision-making, delayed containment, uncontrolled escalation, fragmented accountability, and increased operational damage.

IRS exists because Integrity Response represents the eighth governed space of INTEGROS® — Integrity Governance Architecture, providing the canonical governance framework for responding to verified integrity breaches before

integrity restoration and long-term assurance activities begin.

Scope

This standard may be applied across:

- AI systems
 - autonomous systems
 - organizations
 - digital identities
 - digital assets
 - software systems
 - operational processes
 - governance frameworks
 - cognitive systems
 - critical infrastructure
 - any governed entity requiring standardized integrity response
 - governance.
-

Relationship to Other OOF® Architectures

IRS governs the integrity response layer and interoperates with:

- GOA™
- OBIDENTITY®
- ART™
- ORA™
- AGA™
- AIG®
- CLIA®
- MGIA™
- ASGA™

by providing a common governance framework for executing controlled, accountable, and auditable responses to integrity breaches consistently across operational domains.

Foundational Principle

A verified integrity breach requires a governed response—not an improvised reaction. Every integrity response shall be authorized, proportionate, accountable, evidence-based, and fully auditable.

Canonical Closing Statement

Integrity Response Standard establishes the canonical governance framework for authorizing, coordinating, executing, and governing responses to verified integrity breaches. By defining how governed entities respond to material integrity failures, IRS enables controlled containment, accountable

operational action, governance continuity, and structured transition toward integrity restoration throughout the complete lifecycle of every governed entity.
