

Integrity Restoration Standard (IRRS)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-IRS2-2026-07-21-0009

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard

Governed Space: Integrity Restoration

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 21 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Integrity Restoration

Core Question

How can integrity be restored after a verified integrity breach and governed response?

Canonical Definition

Integrity Restoration Standard (IRRS) defines the governance conditions required to restore integrity following a verified integrity breach and completed response activities. It establishes the restoration principles, recovery procedures, validation requirements, accountability mechanisms, evidence requirements, and governance controls required to return a governed entity to an approved state of integrity while ensuring that restoration is objective, verifiable, and fully auditable throughout the complete lifecycle of the governed entity.

Governance Flow Position

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

Standard Abstract

Responding to an integrity breach does not automatically restore integrity.

After containment and response, governance must ensure that integrity has been objectively re-established through controlled restoration activities supported by evidence, validation, and accountability.

Building upon the governed responses established by IRRS, Integrity Restoration Standard defines how integrity is systematically restored before long-term integrity assurance begins.

IRRS transforms operational recovery into a standardized governance process that confirms integrity has been re-established according to approved governance conditions.

Operational Role

Integrity Restoration Standard governs the restoration and recovery of integrity following verified breaches. It establishes the governance framework required to plan restoration activities, recover governed entities, validate restored integrity, document recovery, and prepare the entity for continuous integrity assurance.

Operational Space

IRRS governs:

- restoration planning
- restoration execution
- recovery validation
- integrity re-establishment
- restoration evidence
- restoration documentation
- restoration governance.

This governed space ensures that integrity restoration is performed consistently, objectively, and under approved governance across all operational environments.

Why This Standard Exists

Containing an integrity breach is not equivalent to restoring integrity.

Without standardized restoration governance, organizations cannot objectively demonstrate that integrity has been fully re-established, operational risks have been eliminated, and governance conditions have been satisfied.

IRRS exists because Integrity Restoration represents the ninth governed space of INTEGROS® — Integrity Governance Architecture, providing the canonical governance framework for restoring integrity before continuous assurance

activities begin.

Scope

This standard may be applied across:

- AI systems
 - autonomous systems
 - organizations
 - digital identities
 - digital assets
 - software systems
 - operational processes
 - governance frameworks
 - cognitive systems
 - critical infrastructure
 - any governed entity requiring standardized integrity restoration
 - governance.
-

Relationship to Other OOF® Architectures

IRRS governs the integrity restoration layer and interoperates with:

- GOA™
- OBIDENITY®
- ART™
- ORA™
- AGA™
- AIG®
- CLIA®
- MGIA™
- ASGA™

by providing a common governance framework for restoring integrity consistently across operational domains following verified breaches and governed responses.

Foundational Principle

Integrity is not restored when the incident ends—it is restored when governed evidence objectively demonstrates that approved integrity conditions have been re-established.

Canonical Closing Statement

Integrity Restoration Standard establishes the canonical governance framework for restoring integrity following verified breaches and governed responses. By defining how integrity is objectively re-established, validated, documented, and governed, IRRS enables consistent recovery, accountable restoration,

operational resilience, and structured transition to continuous integrity assurance throughout the complete lifecycle of every governed entity.
