

Structural Component Integrity Module (SCIM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-STIS-SCIM-2026-07-17-0002

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Structural Integrity Standard (STIS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Structural Component Integrity

Version: 1.0

Status: Canonical · Open Module

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Structural Component Integrity

Canonical Definition

Structural Component Integrity Module (SCIM) defines the governance conditions required to ensure that every structural component of a governed entity maintains its integrity individually while remaining consistent with the integrity of the overall structure throughout the complete lifecycle.

Operational Role

SCIM governs the integrity of individual structural components before the integrity of the complete structure is evaluated. It ensures that every governed component satisfies the structural requirements necessary to contribute to the integrity of the whole.

Minimum Implementation Framework

1. Define Structural Components

Identify every structural component that belongs to the governed entity.
Define each component's purpose, responsibilities, governance role, and contribution to the overall structural integrity.

2. Define Component Integrity Requirements

Establish the structural conditions, quality requirements, dependencies, interfaces, and governance rules that every component must satisfy to preserve its individual integrity.

3. Define Component Failure Logic

Identify the conditions under which a component becomes incomplete, inconsistent, corrupted, unavailable, unauthorized, or otherwise incapable of preserving its structural integrity.

4. Define Governance Response

Define governance actions for validating, correcting, replacing, isolating, repairing, or reapproving structural components whose integrity no longer satisfies the required governance conditions.

5. Preserve Component Records

Preserve component definitions, governance approvals, integrity assessments, change history, dependency information, maintenance activities, and supporting evidence throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Enterprise Information System

Scenario

An organization operates a governance platform consisting of identity services, audit services, authorization services, and policy management components.

Application

SCIM evaluates each component individually to verify that it satisfies its structural integrity requirements before the integrity of the overall platform is assessed.

Result

Every structural component maintains its governed integrity, increasing the reliability, stability, and resilience of the complete governance system.

Use Case 2 — Autonomous AI Platform

Scenario

An autonomous AI system contains separate modules for reasoning, planning, memory, identity, safety, and runtime governance.

Application

SCIM validates that each module independently satisfies its structural integrity requirements and that no compromised component weakens the integrity of the complete AI architecture.

Result

The AI platform preserves structural integrity at the component level, providing a stable foundation for trustworthy autonomous operation and long-term governance.

Canonical Closing Statement

The integrity of a structure depends upon the integrity of its components. Structural Component Integrity Module ensures that every governed component preserves its individual integrity while strengthening the resilience, consistency, and governability of the complete structural architecture.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.

Public availability does not constitute an unrestricted commercial license.

Active Protection & Compatibility Detection applies.
