

Structural Relationship Integrity Module (SRIM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-STIS-SRIM-2026-07-17-0003

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Parent Standard: Structural Integrity Standard (STIS)

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard Module

Governed Space: Structural Relationship Integrity

Version: 1.0

Status: Canonical · Open Module

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Structural Relationship Integrity

Canonical Definition

Structural Relationship Integrity Module (SRIM) defines the governance conditions required to preserve the integrity of relationships between structural components. It ensures that dependencies, interactions, authority paths, information flows, and organizational connections remain complete, consistent, valid, and governable throughout the complete lifecycle of a governed entity.

Operational Role

SRIM governs the integrity of relationships connecting structural components. It ensures that the overall structure remains coherent by preserving the legitimacy, consistency, and continuity of every governed relationship.

Minimum Implementation Framework

1. Define Structural Relationships

Identify every governed relationship between structural components, including dependencies, authority relationships, communication paths, operational interactions, and information flows.

2. Define Relationship Integrity Requirements

Establish the governance conditions that every structural relationship must satisfy, including consistency, validity, traceability, authorization, continuity, and dependency integrity.

3. Define Relationship Failure Logic

Identify the conditions under which a structural relationship becomes invalid, inconsistent, broken, unauthorized, ambiguous, incomplete, or incapable of preserving structural integrity.

4. Define Governance Response

Define governance actions for validating, correcting, restoring, replacing, removing, or reauthorizing structural relationships whenever integrity is compromised.

5. Preserve Relationship Records

Preserve relationship definitions, dependency records, governance approvals, structural revisions, validation history, and supporting evidence necessary to demonstrate relationship integrity throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Corporate Governance

Scenario

A multinational organization restructures its reporting hierarchy, changing governance relationships between executive leadership, regional management, and operational departments.

Application

SRIM validates every new reporting relationship, authority chain, and governance dependency to ensure that the organizational structure continues to preserve structural integrity.

Result

The restructured organization maintains consistent governance relationships without introducing ambiguity, broken authority chains, or structural inconsistencies.

Use Case 2 — Autonomous AI Ecosystem

Scenario

An autonomous AI ecosystem contains multiple agents that exchange information, delegate tasks, coordinate decisions, and share operational resources.

Application

SRIM governs the integrity of communication paths, coordination relationships, authority delegation, and operational dependencies between agents before the system enters production.

Result

The AI ecosystem preserves trustworthy structural relationships, ensuring coordinated, governable, and structurally consistent autonomous operation throughout its lifecycle.

Canonical Closing Statement

A structure is only as strong as the relationships that connect it. Structural Relationship Integrity Module preserves the legitimacy, consistency, and continuity of every governed relationship, ensuring that structural integrity extends beyond individual components to the complete governed architecture.

OOF® MIP® Protection Notice
