

Structural Integrity Standard (STIS)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-INTEGROS-STIS-2026-07-17-0002

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: INTEGROS® — Integrity Governance Architecture

Operational Layer: Meta-Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Integrity Governance

Type: Parent Standard

Governed Space: Structural Integrity

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 17 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · ART™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Structural Integrity

Core Question

Is the structure capable of preserving integrity?

Canonical Definition

Structural Integrity Standard (STIS) defines the structural conditions required for a governed entity to preserve integrity throughout its complete lifecycle. It governs the organization, relationships, dependencies, and structural coherence necessary to ensure that integrity can be maintained under normal operation, change, and evolution.

Structure determines whether integrity can endure.

STIS governs that structure.

Governance Flow Position

Definition → Structure → Conditions → Measurement → State → Deviation → Breach
→ Response → Restoration → Assurance

Standard Abstract

After integrity has been defined, the next governance question is whether the underlying structure is capable of preserving it.

A well-defined integrity model cannot remain valid if the structure supporting it is inconsistent, incomplete, or unstable.

STIS establishes the architectural foundations that enable integrity to persist across changing operational environments.

It defines how components, relationships, dependencies, and organizational structures contribute to—or undermine—the preservation of integrity.

Operational Role

Structural Integrity Standard governs the structural architecture required to maintain integrity. It establishes the organizational framework that enables integrity definitions to remain consistent, resilient, and governable as systems evolve.

Operational Space

STIS governs:

- structural integrity
- structural organization
- component integrity
- relationship integrity
- dependency integrity
- structural coherence
- integrity-preserving architecture.

This governed space ensures that integrity is supported by a structure capable of sustaining it throughout the complete lifecycle of a governed entity.

Why This Standard Exists

Integrity cannot survive without a structure capable of preserving it.

Even when integrity is clearly defined, structural weaknesses may introduce inconsistency, fragmentation, hidden dependencies, or systemic failure.

STIS exists because Structural Integrity represents the second governed space of INTEGROS® — Integrity Governance Architecture, ensuring that integrity is not only defined but also structurally sustainable.

Scope

This standard may be applied across:

- AI systems
- autonomous systems
- organizational governance
- digital identities
- digital assets
- operational processes
- software architectures
- information systems
- cognitive systems
- any governed entity requiring structural integrity.

Relationship to Other OOF® Architectures

STIS governs the structural layer of integrity.

It interoperates with:

- GOA™ for governance structures
- OBIDENTITY® for identity structures
- ART™ for structurally auditable evidence
- ORA™ for operational structures
- AGA™ for accountability structures
- AIG® for behavioral structures
- CLIA® for cognitive structures
- MGIA™ for memory structures
- ASGA™ for autonomous system structures.

Together these architectures ensure that integrity remains structurally governable across every governed domain.

Foundational Principle

Integrity depends not only on definition but also on structure. A governed entity preserves integrity only when its structural foundations remain coherent, consistent, and resilient throughout its lifecycle.

Canonical Closing Statement

Structural Integrity Standard establishes the architectural foundations required to preserve integrity over time. By governing components, relationships, dependencies, and structural coherence, STIS ensures that integrity remains sustainable, resilient, and governable throughout the complete lifecycle of any governed entity.
