

Licensing & Structural IP Framework

OOF™ Standards Access and Structural Protection Policy

OOF™ standards are publicly accessible for reference, academic research, institutional evaluation, and internal implementation.

Open access ensures transparency, interoperability, and methodological clarity.

However, the canonical definitions, structural architectures, systemic layer relationships, and deterministic logic frameworks defined within OOF™ standards are protected under Methodological Intellectual Property (MIP™).

Open Reference Use (No License Required)

The following uses are permitted without authorization:

- Academic citation and research
- Analytical reference or comparison
- Internal institutional implementation
- Educational and non-commercial use
- Descriptive use of terminology not registered as a trademark

Use of terminology in descriptive or analytical context does not constitute infringement where no structural replication or misrepresentation is involved.

Protected Structural Components (MIP™)

The following elements are protected as structural intellectual property:

- Canonical Definitions and semantic anchors
- Multi-layer architectural separation models
- Deterministic compatibility frameworks
- State-transition logic systems
- Cross-layer integrity mechanisms
- Structured systemic relationships between layers
- Governance-aligned validation architectures

Protection applies to systemic architecture and defined structural relationships, not to generic words used independently in unrelated contexts.

Commercial Use Requiring Authorization

Authorization may be required for:

- Commercial replication of OOF™ structural architectures
- Deployment of derivative systems based on canonical structural logic
- White-label or productized implementations of OOF™ standards

- Commercial redistribution of OOF™ standards as proprietary frameworks
- Public claims of official OOF™ compatibility, certification, or endorsement
- Use of protected marks or canonical definitions as marketable system components

Unauthorized commercial replication of structural logic may constitute infringement under applicable intellectual property and unfair competition frameworks.

Canonical Definition Integrity

OOF™ maintains semantic authority over its published canonical definitions.

Canonical definitions represent fixed structural anchors within the OOF™ methodology.

Use of identical terminology in unrelated or independently developed contexts does not constitute infringement.

However, replication of canonical structural definitions, semantic logic, or architectural relationships while implying structural equivalence to OOF™ standards may constitute structural misrepresentation.

Principle of Methodological Integrity

OOF™ does not restrict academic reference or independent discussion. Licensing exists to:

- Preserve semantic stability
- Protect structural ownership
- Prevent architectural distortion
- Maintain deterministic compatibility integrity

The objective is not control of language, but protection of structured methodological architecture.

OOF™ – Origin Open Foundation™
Independent Methodological Authority
Methodological Intellectual Property (MIP™)

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.

Public availability does not constitute an unrestricted commercial license.

Active Protection & Compatibility Detection applies.
