

MEM™ — Monetization Eligibility Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Category: AI and Interpretation

Subcategory: Content Origin Declaration

Module: Monetization Eligibility Module (MEM™)

Type: Declaration Module

Standard: Origin Declaration Standard (ODS™)

Status: Canonical Module

Version: 1.0

Effective Date: 17 March 2026

Canonical Definition

The Monetization Eligibility Module (MEM™) defines whether digital content is eligible for monetization based on declared origin and assigned responsibility.

The module does not evaluate content quality.
It defines eligibility based on declaration.

Declaration

Only two monetization states are defined:

- **VME** — Verified Monetization Eligible
- **NME** — Not Monetization Eligible

Eligibility Rule

Monetization is allowed only when:

- origin is declared (HGC or AGC)
- responsibility is assigned (creator or entity)

Non-Eligible Content

Content is classified as NME when:

- origin is not declared
- content is classified as UGC
- no responsible entity is defined

Usage

Description Level (required)

The monetization state must be included in the description or metadata:

Monetization: VME

OOF Compatible – ODS™ Standard

<https://originopenfoundation.org>

Core Principle

If origin is not declared, monetization is not permitted.

Use Case — Creator and Platform Alignment

Scenario

Creators want monetization.

Platforms need control and trust.

Application

- creators declare origin (HGC / AGC)
- responsibility is assigned
- monetization eligibility is enabled (VME)

Content without declaration defaults to NME.

Result

For Creators:

- access to monetization
- clear ownership signal
- fair competition environment

For Platforms:

- control over monetization flow
 - reduced legal and compliance risk
 - scalable governance without detection
-

Win–Win Model

Creators gain monetization through declaration.

Platforms gain control through structure.

Transparency becomes the shared incentive.

Market Effect

A new content layer emerges:

- declared vs undeclared content
- monetizable vs non-monetizable content

This enables:

- filtering by origin
- filtering by monetization eligibility
- structured content discovery

Users, platforms, and systems can choose what they interact with.

Structural Principle

Value requires responsibility.

Responsibility requires declaration.

Closing Statement

Implementation costs nothing.

Non-compliance costs everything.
