

Asset Identity Standard

Minimal Self-Declaration Implementation Framework

Document Type: Implementation Framework

Related Standard: Economic & Value Standards

Authority: OOF™ Origin Open Foundation™

Version: 1.0

Date: 7 March 2026

1. Purpose

This framework defines the minimum conditions required for an entity to declare implementation of the Asset Identity Standard.

The framework allows organizations to adopt the standard through self-declaration without requiring formal certification.

Self-declaration supports early adoption and transparent implementation of asset identity structures.

2. Declaration Principle

An entity may publicly declare:

“Asset Identity Standard Compatible System”

only if the system implements the minimum identity conditions defined in this framework.

The declaring entity remains responsible for the accuracy of the declaration.

3. Minimum Implementation Requirements

To declare compatibility with the Asset Identity Standard, a system must implement the following elements.

3.1 Unique Asset Identity

Each asset must possess a unique identity reference.

The identity must allow the asset to be distinguished from all other assets within the system>

3.2 Origin Recording

The system must record the origin of the asset.

Origin may include:

- issuing authority
 - creation event
 - system admission event
 - registration reference
-

3.3 Lifecycle Reference

The system must allow the identity of the asset to be referenced during lifecycle events.

Lifecycle events may include:

- validation
 - activation
 - transfer
 - suspension
 - state change
-

3.4 Responsibility Reference

The system must define the entity responsible for maintaining the asset identity record.

Responsibility may be assigned to:

- an organization
 - a system authority
 - environmental accountability
 - a protocol governance mechanism
-

4. Transparency

Organizations declaring compatibility should make available:

- identity structure description
- system boundaries
- lifecycle event structure

This enables external observers to understand how asset identities operate within the system.

5. Optional Independent Verification

Self-declaration does not require independent verification.

However, organizations may voluntarily request:

- third-party verification
 - internal audit review
 - governance oversight
-

6. Declaration Statement

Entities implementing the framework may publicly state:

“This system implements the Asset Identity Standard through a self-declared identity framework.” Such declaration does not imply certification by OOF™.

7. Important Clarification

Self-declaration:

- does not constitute certification
 - does not imply endorsement by OOF™
 - represents a transparency statement by the implementing entity
-
