

Methodology Consistency

Preserving Internal Coherence

Every methodology should remain internally consistent. Without consistency, principles, definitions, processes, structural components, and expected outcomes may gradually contradict one another, reducing reliability, reproducibility, and long-term confidence in the methodology.

Methodology Consistency establishes the principle that every element of a methodology should support a common purpose and operate as part of a coherent methodological system. Definitions should preserve the same meaning throughout the methodology, principles should reinforce rather than conflict with one another, and structural components should remain logically connected across the methodology's entire lifecycle.

Consistency enables methodologies to grow without becoming fragmented. As new concepts, capabilities, processes, or structural components are introduced, they should strengthen the methodology while remaining compatible with its original purpose, scope, governing principles, and methodological identity.

A consistent methodology is easier to understand, communicate, validate, govern, compare, adopt, and continuously improve. It provides confidence that every part of the methodology contributes to the same objective and that its evolution preserves coherence rather than creating unnecessary complexity.

Canonical Closing Statement

Consistency preserves methodological integrity. A methodology whose principles, structure, and purpose no longer support one another cannot remain a coherent methodology.
