

Methodology Governance

Managing Methodologies Throughout Their Complete Lifecycle

Every methodology should be governed. Without governance, methodologies may evolve inconsistently, lose structural integrity, accumulate conflicting changes, or gradually diverge from the purpose and principles upon which they were originally established.

Methodology Governance establishes the principles, responsibilities, and governance mechanisms required to manage methodologies throughout their complete lifecycle while preserving their identity, consistency, quality, and long-term reliability. Governance ensures that methodologies remain controlled assets rather than collections of independently changing documents.

Effective governance provides structured processes for reviewing, maintaining, updating, extending, versioning, approving, and, when appropriate, retiring methodologies. It also establishes accountability by ensuring that significant methodological decisions and changes remain documented, understandable, traceable, and aligned with the methodology's governing principles.

Well-governed methodologies are better equipped to adapt to changing technologies, operational environments, and organizational needs without compromising their structural integrity or methodological identity. Governance supports long-term confidence by ensuring that evolution occurs deliberately, transparently, and under clearly defined methodological control.

Canonical Closing Statement

Methodologies are created through design, but they remain trustworthy through governance. Governance preserves their identity, integrity, and long-term value throughout their entire lifecycle.
