

Methodology-as-a-Service™ (MaaS™)

License Governance Methodologies Instead of Developing Them from Scratch

What Is Methodology-as-a-Service™?

Methodology-as-a-Service™ (MaaS™) is a professional OOF® service that enables organizations to obtain custom governance methodologies through licensing instead of funding their complete internal development.

Rather than investing significant time, resources, and expertise into creating governance methodologies from scratch, organizations can license professionally engineered methodologies designed specifically for their operational environments.

MaaS™ transforms methodology development into a scalable, continuously evolving governance service.

Why This Service Exists

Organizations continuously discover new operational challenges, governance gaps, regulatory requirements, AI risks, accountability issues, and business opportunities.

However, very few organizations possess dedicated methodology engineering capabilities.

Developing professional governance methodologies requires:

- governance architecture,
- methodology engineering,
- operational analysis,
- standards development,
- validation,
- documentation,
- continuous improvement,
- long development cycles.

For many organizations, developing methodologies internally is expensive, time-consuming, and difficult to maintain.

MaaS™ provides an alternative.

Organizations license governance methodologies instead of developing them from scratch.

How MaaS™ Works

Every engagement follows a structured methodology engineering process.

Governance Discovery

Operational Analysis

Architecture on Demand™

Methodology Engineering™

Custom Standards & Modules

Governance Methodology

Methodology Licensing

Continuous Methodology Evolution

OOF® develops the methodology.

The organization licenses its use.

OOF® continuously improves it.

What We Deliver

Depending on operational requirements, MaaS™ may deliver:

- Governance Methodologies
- Governance Architectures
- Parent Standards
- Operational Standards
- Governance Modules
- Governance Frameworks
- Governance Maps
- Governance Navigation Models
- Assessment Methodologies
- Validation Methodologies
- Governance Intelligence Models
- Industry-Specific Governance Solutions

Each methodology is engineered specifically for the client's operational environment while remaining compatible with the broader OOF® governance ecosystem whenever appropriate.

Who May Benefit

Organizations

Organizations seeking structured governance methodologies to improve operational governance, accountability, resilience, AI governance, digital transformation, compliance, and operational excellence.

Government Institutions

Public-sector organizations requiring transparent, auditable, standardized, reusable governance methodologies while reducing long-term methodology development costs.

Consulting Firms

Consulting firms seeking to rapidly expand their service portfolio by licensing governance methodologies instead of investing significant resources into developing their own.

Implementation Partners

Technology providers and implementation partners requiring structured governance methodologies to support customer implementations and long-term governance operations.

AI & Technology Companies

Organizations developing AI systems, autonomous systems, robotics, intelligent platforms, and digital governance solutions requiring structured governance methodologies.

Industry Specialists

Organizations that have identified new governance opportunities but require professional methodology engineering to transform operational knowledge into structured, scalable methodologies.

What Organizations License

Organizations may license:

- complete governance methodologies,
- governance architectures,
- governance standards,
- governance frameworks,
- governance assessments,
- governance models,

- architecture extensions,
- custom-developed governance solutions.

Licensing models may be adapted according to organizational requirements.

Why Organizations Choose MaaS™

Organizations can:

- significantly reduce methodology development time,
 - reduce methodology engineering costs,
 - accelerate deployment,
 - reduce implementation risk,
 - continuously receive methodology improvements,
 - expand governance capabilities,
 - focus internal resources on implementation instead of methodology development.
-

Relationship to OOF®

MaaS™ is powered by the complete OOF® governance ecosystem.

Methodologies may incorporate governance architectures including:

- GOA™
- ORA™
- CLIA®
- MGIA™
- AGA™
- AIG™
- ASGA™

When operational requirements extend beyond existing architectures, OOF® engineers new governance standards, modules, methodologies, and governance spaces as part of the engagement.

This enables organizations to obtain governance solutions tailored to their specific operational environments while remaining compatible with an expanding governance ecosystem.

Why It Matters

Organizations should not be forced to reinvent governance every time new operational challenges emerge.

MaaS™ enables organizations to access professionally engineered governance methodologies through licensing, allowing them to adopt structured governance more rapidly, reduce development costs, shorten time-to-deployment, and continuously evolve as operational

Canonical Closing Statement

Methodology-as-a-Service™ represents a new model for governance methodology delivery. Instead of treating methodologies as one-time consulting outputs, OOF® designs, engineers, maintains, evolves, and licenses governance methodologies that organizations, government institutions, consulting firms, implementation partners, and technology companies can immediately apply to solve complex operational challenges while continuously benefiting from the evolution of the OOF® governance ecosystem.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property
