

Minimal Implementation Framework (MIF)

Step 1 — Input Recognition

Identify the asset entering the system.

Minimum requirement:

- identifiable asset
 - defined input structure
-

Step 2 — Validation Reference

Confirm that the asset has passed a validation process.

Minimum requirement:

- reference to validation source (MTVF or equivalent)
 - traceable validation context
-

Step 3 — Integrity Check

Evaluate whether the asset shows signs of inconsistency or manipulation.

Minimum requirement:

- structural consistency
 - no detected anomalies
-

Step 4 — Classification Assignment

Assign one of three states:

- Verified
 - Unverified
 - Contaminated
-

Step 5 — Decision Enforcement

Apply system behavior based on classification:

- Verified → allow
 - Unverified → restrict
 - Contaminated → block
-

Structural Rule

No asset may enter a system without TSA classification.

Closing Statement

Modern systems operate on assumed trust.
TSA replaces assumption with classification.

Trust is not declared.
Trust is validated and enforced.
