

Carbon Integrity™

Minimal Self-Declaration Framework

This framework provides a simple method for applying the Carbon Integrity™ Standard through transparent disclosure of carbon-related operational information.

It is designed for immediate use by small and medium-sized organizations.

This framework is not a certification.

It does not calculate emissions.

It establishes **structural transparency for carbon communication**.

Implementation Steps

Step 1 — Define the Operational Boundary

Clearly define what the carbon-related statement covers. Examples:

- Production site only
- Production and packaging
- Production, packaging, and transport
- Full operational footprint
- Other clearly defined scope

If the boundary is unclear, the declaration is invalid.

Step 2 — Disclose Energy Use

Declare the primary energy source used in operations.

Examples:

- Grid electricity
- Renewable energy
- Mixed energy sources
- Other defined source

If known, the organization may also disclose approximate annual consumption or renewable share.

If information is not measured, declare:

“Energy data currently not measured.”

Transparency is more important than precision.

Step 3 — Disclose Transport Conditions

Declare the main transport method used for distribution.

Examples:

- Truck
- Rail
- Ship
- Air
- Mixed transport methods

If approximate distribution distance is known, it may be disclosed.

Unknown information must not be presented as verified data.

Step 4 — Disclose Material Inputs

Declare primary raw materials and packaging types used in production.

Examples:

- main material categories
- packaging type
- recycled material share (if applicable)

Absence of recycled material must not be concealed.

Step 5 — Declare Information Source

State how the disclosed information was obtained.

Examples:

- utility bills
- supplier documentation
- direct operational measurement
- internal operational estimation

Assumptions must be clearly declared.

Step 6 — Responsibility Declaration

A public responsibility statement must be issued.

Example declaration: “This Carbon Integrity™ Minimal Self-Declaration is made under the Carbon Integrity™ Standard. The declaring entity accepts responsibility for the transparency and accuracy of the disclosed information.” The declaration should include:

- responsible person or organization
- declaration date
- public contact reference

The declaration may be published:

- on a website
 - in sustainability documentation
 - in product information
 - via QR code reference
-

Documentation Requirements

Implementation requires only:

- one operational boundary description
- one disclosure sheet covering energy, transport, and materials
- one public responsibility declaration

No certification required.

No external audit required under the minimal implementation level.

Structural Value

Carbon Integrity™ transforms:

unclear carbon communication

into

structured transparency and accountability:

This strengthens:

- credibility of sustainability communication
 - protection against greenwashing risk
 - supply chain transparency
 - readiness for future carbon reporting requirements
-

Closing Principle

Responsible carbon communication begins with transparent disclosure.
