

# Whole Process Plastic Integrity™

## Minimal Self-Declaration Framework (WPPI-SD v1.0)

Category: Environmental Integrity Standards

Subcategory: Process & Material Integrity

Status: Open Transparency Model

Effective Date: 25 February 2026

This framework enables organizations to publicly declare Whole Process Plastic Integrity™ using a simple transparency model.

It does not certify plastic-free status.

It does not require laboratory testing.

It establishes structured responsibility for plastic exposure disclosure across the operational process.

---

## Implementation Steps

### Step 1 — Define Process Boundary

The declaring entity must define the operational scope of the declaration.

Examples:

- single production facility
- multiple facilities
- production only
- production and packaging
- full chain including logistics

Undefined process boundaries invalidate the declaration.

---

### Step 2 — Identify Plastic Exposure Points

The entity reviews the production chain and identifies any plastic interaction points.

Examples include:

- raw material packaging
- processing equipment contact
- auxiliary materials
- storage systems
- product packaging
- transport and handling systems

If no intentional plastic components exist, this must be explicitly declared.

---

### Step 3 — Declare Plastic Integrity Tier

The entity must select and declare one classification tier:

#### Process Plastic Controlled (PPC)

Plastic exposure minimized with declared control mechanisms.

---

## Process Plastic Minimal (PPM)

Very limited plastic interaction within the process chain.

## Whole Process Plastic-Free (WPPF)

No intentional plastic components present within the declared process boundary.

Undeclared classification invalidates the claim.

---

## Step 4 — Contamination Awareness Statement

The entity must acknowledge whether potential contamination pathways exist.

Examples include:

- equipment abrasion
- transport exposure
- environmental contamination

If no known contamination risks are identified, this must be declared.

## Step 5 — Responsibility Declaration

A public declaration must be issued confirming responsibility for the disclosure.

Example statement:

"This Whole Process Plastic Integrity™ declaration is made under the WPPI™ Standard.

The declaring entity accepts responsibility for the transparency and accuracy of the disclosed process information."

The declaration should include:

- legal entity name
- responsible person
- declaration date
- public contact reference

The declaration may be published:

- on a website
  - on product documentation
  - in supply chain documentation
  - via QR code reference
- 

## Documentation Requirements

Implementation requires only:

- a defined process boundary
- a list of identified plastic exposure points
- a selected integrity tier
- a public responsibility declaration

No external certification required under the minimal self-declaration model.

## Structural Value

WPPI™ Self-Declaration transforms:

uncertain plastic claims  
into

---

transparent process accountability.

This supports:

- supply chain transparency
  - contamination awareness
  - credible plastic reduction claims
  - future certification readiness.
- 

## Closing Principle

Plastic integrity is not determined by a label.

It emerges from transparent control of the entire production process.

---
