

Use is Open. Validity is Conditional.

Core Statement

Use of OOF® standards is open.

Validity within the OOF® system is conditional.

This principle defines the difference
between **access** and **system recognition**.

Anyone may use OOF® methodologies.

Only systems that satisfy defined structural
conditions may be considered valid
within the OOF® framework.

Open Use

Anyone may:

- read OOF® standards
- use their concepts
- implement their logic

Use is open and unrestricted.

Open access enables adoption,
experimentation, learning,
and implementation across environments.

System States

A system may exist in one
of the following states:

- **Open Use** — the system uses OOF® concepts
without structural validation
- **Compatible** — the system aligns with
defined methodological conditions
- **Validated** — the system satisfies full validation
and enforcement conditions

These states are fixed and non-interchangeable.

- Use alone does not create compatibility.
 - Compatibility alone does not create validation.
-

Recognition and Reference

- Use of OOF® standards does not require permission.
- However, recognition within the OOF® system
requires clear reference to the canonical source.

Without valid reference:

- use may still occur
-

- but the system is not OOF®-recognized
- and cannot claim compatibility or validated status within the framework

Reference supports:

- traceability
 - transparency
 - alignment with canonical meaning
-

What Open Use Does Not Grant

- system validity
- compatibility status
- validated status
- methodological recognition within OOF®

Use alone does not create validity.

Validity Condition

A system is valid within OOF® only if:

- structural conditions are satisfied
- defined rules are respected
- system behavior aligns with methodology

If these conditions are not met:

- the system is considered non-valid within the framework
 - its outputs are not recognized as valid within OOF®
-

System Principle

- Use is open.
 - Validity is conditional.
 - Recognition requires reference.
-

Relationship to OOF® Protection

This principle operates within the broader OOF® protection and compatibility framework.

- Open access preserves adoption.
 - Conditional validity preserves system integrity.
-

Final Statement

Use is open.

Validity is conditional.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.

Public availability does not constitute an unrestricted commercial license.

Active Protection & Compatibility Detection applies.
