

OOF® Official Architecture Map Template

[Architecture Name]

Official [Governed Domain] Reference Map for AI Systems, Autonomous Systems, Organizations, Institutions, Critical Infrastructure, and Future Intelligent Ecosystems.

[Architecture] serves as the official reference map used to identify, classify, navigate, validate, and understand the governable spaces within its domain across AI systems, autonomous systems, organizations, institutions, and future intelligent ecosystems.

The purpose of [Architecture] is not to execute or replace the governed domain.

The purpose of [Architecture] is to identify, define, and map the primary governable spaces of the domain.

Official Reference Map For

[Architecture] serves as the official reference map for:

- AI Systems
- Autonomous Systems
- Autonomous Agents
- Multi-Agent Systems
- Human-AI Environments
- Robotics
- Organizations
- Institutions
- Critical Infrastructure
- Future Intelligent Ecosystems

Core Architectural Principle

Every governed space answers one primary question.

No governed space duplicates the purpose of another governed space.

Every governed space begins where the previous governed space ends.

Together these governed spaces form the official reference map of the architecture.

Official Governance Flow

[Architecture Flow]

1. [Parent Standard]

Governed Space: [Governed Space]

Core Question

[Core Question]

Canonical Definition

[Canonical Definition]

Governance Boundary

Begins when...

Ends when...

(Repeat for every Parent Standard.)

Core Governed Spaces

The mapped spaces within the architecture:

- Space 1
- Space 2
- Space 3
- Space 4
- Space 5
- Space 6
- Space 7
- Space 8
- Space 9
- Space 10

Architectural Position

[Architecture] governs the complete lifecycle of its governed domain.

The architecture progresses:

[Architecture Flow]

Together these governed spaces define how the domain remains valid, governable, accountable, traceable, and operational throughout its complete lifecycle.

What [Architecture] Defines

[Architecture] defines:

- where the governed domain begins,
- where governance applies,
- where validity is established,
- where accountability exists,
- where coordination occurs,
- where evolution is governed,
- where operational continuity is maintained,
- where governance ends.

[Architecture] provides the official governance language used for domain space identification across complex systems.

Compatible OOF® Architectures

The architecture includes only those that are actually relevant:

- **RIS™** — Runtime Integrity Standard
 - **GOA™** — Governance Architecture
 - **ORA™** — Operational Reality Architecture
 - **CLIA®** — Cognitive Governance Intelligence Architecture
 - **MGIA™** — Memory Governance Intelligence Architecture
 - **AGA™** — Accountability Governance Architecture
 - **AIG™** — AI Governance Architecture
 - **ASGA™** — Autonomous Systems Governance Architecture
-

Canonical Principle

[Architecture] does not govern what a system does.

[Architecture] governs how the governed domain itself remains valid, governable, accountable, traceable, explainable, and operational throughout its complete lifecycle.

Canonical Closing Statement

[Architecture] serves as the official OOF® reference architecture for its governed domain.

By defining the primary governable spaces of that domain, [Architecture] provides a structured governance reference architecture used to identify, classify, navigate, validate, govern, and continuously improve the domain across AI systems, autonomous systems, organizations, institutions, and future intelligent ecosystems.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property
