

Authority Limitation & Boundary Module (ALBM)

OriginID: OOF-OID-OBID-AIS-ALBM-2026-07-12-0003
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: OBIDENITY® — Origin-Bound Identity
Governance Architecture
Operational Layer: Identity Governance Layer
Governed Space: Authority Limitations & Boundaries
Category: Governance & Enforcement
Subcategory: Identity Governance
Type: Authority Integrity Standard Module
Parent Standard: Authority Integrity Standard (AIS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 12 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA®
· MGIA™ · ASGA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Authority Limitation & Boundary Module (ALBM) defines the structural conditions under which authority over a governed identity remains limited, bounded, enforceable, and continuously governable throughout the complete identity lifecycle.

ALBM governs authority limitations.

The module establishes the governance conditions required to ensure that every authority operates only within its legitimate scope and never exceeds its authorized governance boundaries.

Authority requires limits.

Governance enforces those limits.

ALBM governs those boundaries.

Module Operational Role

ALBM defines the authority limitation layer of AIS.

Its role is to establish and preserve governance boundaries that prevent unauthorized or excessive use of authority.

Module Operational Space

ALBM governs:

- authority boundaries,
 - authority limitations,
 - governance constraints,
 - scope of authority,
 - boundary enforcement,
 - authorized governance actions,
 - authority restrictions,
 - governance boundary control.
-

Module Function

The module applies wherever governance authority must operate within predefined limits and governance boundaries.

Minimum Implementation Framework

1. Define the Authority Boundary Object

Identify the authority relationship requiring governance boundaries.

2. Define Boundary Conditions

Establish governance conditions governing the scope, limits, restrictions, and permitted authority actions.

3. Define Boundary Failure Logic

Identify conditions where authority exceeds its scope, violates governance boundaries, becomes uncontrolled, or governance-invalid.

4. Define Governance Response

Define governance actions for restriction, suspension, escalation, corrective action, or authority revocation.

5. Preserve Boundary Records

Preserve authority limitations, governance decisions, boundary definitions, supporting evidence, and enforcement history.

Use Case 1 — Enterprise Identity Governance

Scenario

An identity administrator is authorized to manage user identities but not ownership transfers.

Application

ALBM defines and enforces the governance boundaries of the administrator's authority.

Result

Authority remains limited to its legitimate governance scope.

Use Case 2 — AI Identity Administration

Scenario

A service provider manages operational AI identities but is prohibited from changing ownership or governance policies.

Application

ALBM establishes the authority boundaries governing permitted actions.

Result

Operational authority remains controlled, enforceable, and continuously governable.

Canonical Closing Statement

Authority earns trust not only through legitimacy, but through restraint. Authority Limitation & Boundary preserves governance integrity by ensuring that every authority remains within its authorized boundaries throughout the complete identity lifecycle.
