

About Identity Integrity Standard (IIS)

Governing Identity Integrity

Identity Integrity Standard (IIS) defines the governance conditions under which governed identity remains unique, authentic, verifiable, distinguishable, and continuously governable throughout the complete identity lifecycle.

Origin determines where identity begins.

Identity determines what the governed entity is.

IIS governs this identity governance space.

What Is Identity Integrity?

Identity integrity is the governed condition in which an identity remains uniquely identifiable, authentic, classifiable, verifiable, and protected from ambiguity, duplication, substitution, or identity corruption throughout its complete lifecycle.

It enables organizations to establish trustworthy identities, preserve identity continuity, validate identity authenticity, and ensure that every governed identity remains consistently recognizable across systems, organizations, platforms, and future operational environments.

Canonical Definition

Identity Integrity Standard (IIS) defines the structural conditions under which a governed identity remains unique, authentic, distinguishable, classifiable, verifiable, and continuously governable throughout its complete lifecycle.

Why IIS Exists

Governed identity cannot exist without trustworthy identity integrity.

Without governed identity, ownership cannot be established, authority cannot be assigned, responsibility cannot be attributed, and governance cannot reliably operate.

IIS exists because Identity Integrity represents the **second governable space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

What IIS Governs

IIS governs the structural conditions under which identity remains:

- unique,
- authentic,
- distinguishable,
- verifiable,
- continuous,
- governable.

Rather than governing identity technologies or authentication mechanisms, IIS governs the governance conditions required for trustworthy identity integrity.

Architectural Position

Identity Integrity Standard serves as the **second governance space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

It establishes the governance foundation that transforms a verified origin into a uniquely governable identity capable of supporting ownership, authority, permissions, responsibility, provenance, transfer, continuity, and auditability.

Without governed identity, the remaining governance architecture cannot operate reliably.

Canonical Closing Statement

Origin establishes existence. Identity establishes uniqueness.
Identity Integrity provides the governance foundation that enables every governed identity to remain authentic, distinguishable, and continuously governable throughout its complete lifecycle.
