

# Origin Creation Verification Module (OCVM)

**OriginID:** OOF-OID-OBID-OIS-OCVM-2026-07-12-0001  
**Architecture Ecosystem:** Structured Reality Standards™  
**Architecture Family:** OBIDENITY® — Origin-Bound Identity Governance Architecture  
**Operational Layer:** Identity Governance Layer  
**Governed Space:** Origin Creation Verification  
**Category:** Governance & Enforcement  
**Subcategory:** Identity Governance  
**Type:** Origin Integrity Standard Module  
**Parent Standard:** Origin Integrity Standard (OIS)  
**Version:** 1.0  
**Status:** Canonical · Open Module  
**Origin Date:** 12 July 2026  
**Compatibility:** OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™  
**AI-Readable:** Yes  
**Authority:** OOF®  
**Protection:** MIP™ — Methodological Intellectual Property  
**Canonical Language:** English (UCL)

---

## Canonical Definition

**Origin Creation Verification Module (OCVM)** defines the structural conditions under which the creation of a governed identity origin is verified, authenticated, attributed, and governed before the origin becomes the trusted foundation of an identity.

OCVM governs origin creation verification.

The module establishes the governance conditions required to ensure that every governed identity originates from a legitimate, verifiable, and governance-approved creation event.

Every governed identity begins with creation.

Creation must be verified before trust can exist.

OCVM governs that verification.

---

## Module Operational Role

OCVM defines the origin creation verification layer of OIS.

Its role is to ensure that every governed identity begins from an authentic and verifiable origin.

---

# Module Operational Space

OCVM governs:

- origin creation verification,
- origin authenticity,
- creation event validation,
- origin attribution,
- trusted origin establishment,
- governed identity creation,
- governance verification,
- identity origin approval.

---

## Module Function

The module applies wherever organizations must verify the legitimate creation of a governed identity before it becomes operational.

---

## Minimum Implementation Framework

### 1. Define the Origin Creation Object

Identify which identity creation events establish a governed origin.

### 2. Define Verification Conditions

Establish governance conditions governing origin authenticity, verification, and approval.

### 3. Define Verification Failure Logic

Identify conditions where origin creation becomes unverifiable, illegitimate, inconsistent, or governance-invalid.

### 4. Define Governance Response

Define governance actions for approval, rejection, investigation, correction, or suspension of identity origin creation.

### 5. Preserve Origin Verification Traceability

Preserve creation records, verification evidence, governance decisions, origin approvals, and supporting documentation.

---

## Use Case 1 — Enterprise Digital Identity

### Scenario

A new enterprise digital identity is created for a critical operational system.

## Application

OCVM verifies that the identity originates from an authorized and governance-approved creation process.

## Result

The identity begins with a trusted, verifiable, and attributable origin.

---

## Use Case 2 — Autonomous AI Agent

### Scenario

An autonomous AI agent receives a new governed identity before entering operational service.

### Application

OCVM validates the origin creation event before the identity becomes operational.

### Result

The organization establishes a trustworthy origin as the foundation of the agent's governed identity.

---

## Canonical Closing Statement

**Trust begins at the moment of creation. Origin Creation Verification ensures that every governed identity starts from an authentic, verifiable, and continuously trustworthy origin.**
