

Origin Integrity Standard (OIS)

OriginID: OOF-OID-OBID-OIS-2026-07-12-0001

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: OBIDENTITY® — Origin-Bound Identity

Governance Architecture

Operational Layer: Identity Governance Layer

Category: Governance & Enforcement

Subcategory: Identity Governance

Type: Parent Standard

Governed Space: Origin Integrity

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 12 July 2026

Compatibility: OOF Methodology OS · Governance Architecture (GOA™) ·

Operational Reality Architecture (ORA™) · Accountability Governance

Architecture (AGA™) · AI Governance Architecture (AIG®) · Cognitive

Governance Intelligence Architecture (CLIA®) · Memory Governance

Intelligence Architecture (MGIA™) · Autonomous Systems Governance

Architecture (ASGA™)

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Origin Integrity

Core Question

Where did the governed identity originate?

Canonical Definition

Origin Integrity Standard (OIS) defines the structural conditions under which the origin of a governed identity remains authentic, attributable, verifiable, traceable, and continuously governable throughout its complete lifecycle.

OIS governs origin integrity.

The standard establishes the governance conditions required to ensure that every governed identity begins from a legitimate, verifiable, and attributable origin before identity, ownership, authority, permission, responsibility, provenance, transfer, continuity, or auditability can

be established.

Every governed identity begins with origin.

Governance preserves trust in that origin.

OIS governs that origin.

Governance Flow Position

Origin → Identity → Ownership → Authority → Permission →
Responsibility → Provenance → Transfer → Continuity → Auditability

Standard Abstract

Every governed identity begins somewhere.

Without a trustworthy origin:

- identity cannot be reliably established,
- ownership cannot be confidently assigned,
- authority cannot be legitimately delegated,
- provenance cannot be continuously reconstructed,
- long-term trust becomes difficult to preserve.

OIS establishes the governance conditions required for trustworthy, attributable, and continuously governable identity origin.

Operational Role

Origin Integrity Standard provides the governance layer responsible for establishing the legitimate beginning of every governed identity.

Its role is to ensure that identity origin remains authentic, verifiable, attributable, and continuously governable throughout the complete identity lifecycle.

Operational Space

OIS governs:

- origin creation,
 - origin verification,
 - origin attribution,
 - origin traceability,
 - origin continuity,
 - origin evidence,
 - origin legitimacy,
 - trustworthy identity origin.
-

This governed space ensures that every governed identity begins from a trustworthy governance foundation.

Why This Standard Exists

Governed identity cannot begin with ownership, authority, or responsibility.

It must begin with origin.

OIS exists because origin represents the **first governable space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture.**

Scope

This standard may be applied across:

- AI identities,
 - autonomous agents,
 - robotics,
 - digital assets,
 - organizations,
 - human identities,
 - digital twins,
 - enterprise identity systems,
 - public-sector identity infrastructures,
 - future intelligent ecosystems.
-

Relationship to Other OOF® Architectures

OIS governs origin integrity.

It interoperates with:

- **GOA™** for governance principles,
- **ORA™** for operational reality,
- **AGA™** for accountability,
- **AIG®** for AI behavioral governance,
- **CLIA®** for cognition,
- **MGIA™** for memory governance,
- **ASGA™** for autonomous operational governance.

Together these architectures ensure that governed identities begin from a trustworthy, attributable, and continuously governable origin.

Foundational Principle

Trustworthy identity begins with trustworthy origin. Every governed identity must remain continuously connected to its legitimate origin throughout its complete lifecycle.

Canonical Closing Statement

Origin is the first governance anchor of identity. By governing origin itself, OIS establishes the trusted foundation upon which identity, ownership, authority, responsibility, provenance, continuity, and auditability can exist throughout the complete lifecycle of a governed identity.
