

About Ownership Integrity Standard (OWIS)

Governing Ownership Integrity

Ownership Integrity Standard (OWIS) defines the governance conditions under which ownership of a governed identity remains legitimate, attributable, verifiable, transferable, and continuously governable throughout the complete identity lifecycle.

Origin establishes where identity begins.

Identity establishes what exists.

Ownership establishes to whom the governed identity legitimately belongs.

OWIS governs this identity governance space.

What Is Ownership Integrity?

Ownership integrity is the governed condition in which ownership of a governed identity remains legitimate, continuously attributable, independently verifiable, protected from unauthorized claims, and preserved throughout its complete lifecycle.

It enables organizations to establish lawful ownership, validate ownership claims, resolve ownership conflicts, preserve ownership continuity, and ensure that every governed identity remains under legitimate governance.

Canonical Definition

Ownership Integrity Standard (OWIS) defines the structural conditions under which ownership of a governed identity remains legitimate, attributable, verifiable, transferable, and continuously governable throughout the complete identity lifecycle.

Why OWIS Exists

A governed identity cannot participate in trusted governance unless its legitimate owner is known.

Without governed ownership, authority cannot be legitimately exercised, permissions cannot be reliably granted, responsibility cannot be fairly assigned, and governance disputes become difficult to resolve.

OWIS exists because Ownership Integrity represents the **third governable space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

What OWIS Governs

OWIS governs the structural conditions under which ownership remains:

- legitimate,
- attributable,
- verifiable,
- transferable,
- continuous,
- governable.

Rather than governing legal property systems or contractual ownership mechanisms, OWIS governs the governance conditions required for trustworthy ownership integrity.

Architectural Position

Ownership Integrity Standard serves as the **third governance space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

It establishes the governance foundation that connects a governed identity with its legitimate owner before authority, permissions, responsibility, provenance, transfer, continuity, and auditability can be governed.

Without governed ownership, the remaining governance relationships cannot be established with confidence.

Canonical Closing Statement

Origin creates identity. Identity enables ownership. Ownership Integrity establishes the trusted governance relationship that connects every governed identity to its legitimate owner throughout its complete lifecycle.
