

Ownership Assignment Module (OOAM)

OriginID: OOF-OID-OBID-OWIS-OOAM-2026-07-12-0001
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: OBIDENTITY® — Origin-Bound Identity
Governance Architecture
Operational Layer: Identity Governance Layer
Governed Space: Ownership Assignment
Category: Governance & Enforcement
Subcategory: Identity Governance
Type: Ownership Integrity Standard Module
Parent Standard: Ownership Integrity Standard (OWIS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 12 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA®
· MGIA™ · ASGA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Ownership Assignment Module (OOAM) defines the structural conditions under which ownership of a governed identity is established, assigned, recorded, and continuously governable throughout the complete identity lifecycle.

OOAM governs ownership assignment.

The module establishes the governance conditions required to ensure that every governed identity is assigned to a legitimate owner through an authorized, attributable, and verifiable governance process.

Ownership does not appear automatically.

Ownership must be legitimately assigned.

OOAM governs that assignment.

Module Operational Role

OOAM defines the ownership assignment layer of OWIS.

Its role is to establish legitimate ownership before governance authority, permissions, and responsibilities are exercised.

Module Operational Space

OOAM governs:

- ownership assignment,
 - owner identification,
 - ownership establishment,
 - ownership registration,
 - governance assignment,
 - ownership attribution,
 - initial ownership governance,
 - legitimate ownership creation.
-

Module Function

The module applies wherever organizations must establish and govern the initial ownership of a governed identity.

Minimum Implementation Framework

1. Define the Ownership Object

Identify the governed identity requiring legitimate ownership.

2. Define Ownership Assignment Conditions

Establish governance conditions governing how legitimate ownership is assigned and recorded.

3. Define Assignment Failure Logic

Identify conditions where ownership assignment becomes unauthorized, ambiguous, duplicated, invalid, or governance- invalid.

4. Define Governance Response

Define governance actions for ownership approval, rejection, correction, reassignment, or governance escalation.

5. Preserve Ownership Assignment Records

Preserve ownership assignments, governance decisions, attribution records, supporting evidence, and ownership history.

Use Case 1 — AI Identity Registration

Scenario

An organization creates a new governed AI identity for enterprise operations.

Application

OOAM assigns the governed identity to its legitimate organizational owner before activation.

Result

Ownership is established through a documented and governance-approved assignment process.

Use Case 2 — Digital Asset Identity

Scenario

A governed digital asset is registered within an enterprise identity ecosystem.

Application

OOAM establishes the legitimate owner before the asset enters operational use.

Result

The governed identity begins its lifecycle with clear, attributable, and governance-valid ownership.

Canonical Closing Statement

**Ownership becomes trustworthy only when its beginning is trustworthy.
Ownership Assignment establishes the first legitimate governance
relationship between a governed identity and its rightful owner.**
