

Ownership Evidence Module (OOEM)

OriginID: OOF-OID-OBID-OWIS-OOEM-2026-07-12-0005
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: OBIDENTITY® — Origin-Bound Identity Governance Architecture
Operational Layer: Identity Governance Layer
Governed Space: Ownership Evidence
Category: Governance & Enforcement
Subcategory: Identity Governance
Type: Ownership Integrity Standard Module
Parent Standard: Ownership Integrity Standard (OWIS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 12 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Ownership Evidence Module (OOEM) defines the structural conditions under which evidence supporting ownership of a governed identity remains authentic, attributable, verifiable, preserved, and continuously governable throughout the complete identity lifecycle.

OOEM governs ownership evidence.

The module establishes the governance conditions required to ensure that every ownership relationship is supported by sufficient, trustworthy, and independently verifiable evidence.

Ownership claims require evidence.

Governance preserves that evidence.

OOEM governs that evidence.

Module Operational Role

OOEM defines the ownership evidence layer of OWIS.

Its role is to preserve trustworthy evidence supporting the legitimacy of ownership throughout the complete identity lifecycle.

Module Operational Space

OOEM governs:

- ownership evidence,
 - ownership proof,
 - evidence preservation,
 - ownership verification,
 - evidence integrity,
 - governance evidence,
 - ownership documentation,
 - trustworthy ownership records.
-

Module Function

The module applies wherever organizations must preserve evidence demonstrating legitimate ownership of a governed identity.

Minimum Implementation Framework

1. Define the Ownership Evidence Object

Identify the evidence required to support ownership of the governed identity.

2. Define Evidence Conditions

Establish governance conditions governing ownership evidence authenticity, preservation, attribution, and verification.

3. Define Evidence Failure Logic

Identify conditions where ownership evidence becomes incomplete, manipulated, unverifiable, inconsistent, or governance-invalid.

4. Define Governance Response

Define governance actions for evidence verification, additional evidence requests, investigation, correction, or governance escalation.

5. Preserve Ownership Evidence Records

Preserve ownership evidence, governance decisions, verification history, supporting documentation, and audit records.

Use Case 1 — AI Ownership Verification

Scenario

An organization must demonstrate legitimate ownership of a governed AI

identity during an external governance review.

Application

OOEM provides the preserved evidence supporting the ownership relationship.

Result

Ownership is independently verified using governance-valid evidence.

Use Case 2 — Digital Asset Ownership Audit

Scenario

A governed digital asset undergoes a compliance audit requiring proof of ownership.

Application

OOEM preserves and presents the evidence supporting legitimate ownership throughout the asset lifecycle.

Result

Ownership remains transparent, verifiable, and continuously governance-valid.

Canonical Closing Statement

Ownership may be claimed by many, but it is proven through evidence. Ownership Evidence preserves the verifiable foundation that allows legitimate ownership to withstand time, scrutiny, and governance review.
