

Ownership Validation Module (OVAM)

OriginID: OOF-OID-OBID-OWIS-OVAM-2026-07-12-0002
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: OBIDENTITY® — Origin-Bound Identity Governance Architecture
Operational Layer: Identity Governance Layer
Governed Space: Ownership Validation
Category: Governance & Enforcement
Subcategory: Identity Governance
Type: Ownership Integrity Standard Module
Parent Standard: Ownership Integrity Standard (OWIS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 12 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Ownership Validation Module (OVAM) defines the structural conditions under which ownership of a governed identity remains legitimate, verifiable, authentic, and continuously governable throughout the complete identity lifecycle.

OVAM governs ownership validation.

The module establishes the governance conditions required to ensure that every ownership claim can be independently verified before ownership is recognized, transferred, or exercised within governed environments.

Ownership claims require validation.

Governance verifies those claims.

OVAM governs that validation.

Module Operational Role

OVAM defines the ownership validation layer of OWIS.

Its role is to ensure that every ownership relationship satisfies predefined governance validation requirements before it is accepted

as legitimate.

Module Operational Space

OVAM governs:

- ownership validation,
 - ownership verification,
 - ownership authenticity,
 - ownership legitimacy,
 - governance validation,
 - ownership confirmation,
 - trusted ownership verification,
 - continuous ownership validation.
-

Module Function

The module applies wherever organizations must verify the legitimacy of ownership before governance decisions, authority, permissions, or transfers are performed.

Minimum Implementation Framework

1. Define the Ownership Validation Object

Identify the ownership relationship requiring validation.

2. Define Validation Conditions

Establish governance conditions governing ownership verification, legitimacy, and validation requirements.

3. Define Validation Failure Logic

Identify conditions where ownership becomes unverifiable, disputed, fraudulent, inconsistent, or governance-invalid.

4. Define Governance Response

Define governance actions for ownership verification, rejection, investigation, correction, suspension, or governance escalation.

5. Preserve Validation Records Preserve ownership validation results, governance decisions, supporting evidence, ownership history, and related documentation.

Use Case 1 — Enterprise AI Ownership

Scenario

An enterprise requests recognition as the legitimate owner of a governed AI identity.

Application

OVAM validates the ownership claim before governance authority is granted.

Result

Only verified ownership relationships become governance-valid.

Use Case 2 — Cross-Organization Identity Transfer

Scenario

A governed identity is transferred between two organizations.

Application

OVAM validates the legitimacy of the new ownership claim before the transfer is completed.

Result

Ownership changes occur only after independent governance validation.

Canonical Closing Statement

Ownership is established by assignment, but trusted through validation. Ownership Validation ensures that every ownership relationship is supported by evidence before governance recognizes it as legitimate.
