

Ownership Integrity Standard (OWIS)

OriginID: OOF-OID-OBID-OWIS-2026-07-12-0003

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: OBIDENTITY® — Origin-Bound Identity

Governance Architecture

Operational Layer: Identity Governance Layer

Category: Governance & Enforcement

Subcategory: Identity Governance

Type: Parent Standard

Governed Space: Ownership Integrity

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 12 July 2026

Compatibility: OOF Methodology OS · Governance Architecture (GOA™) ·

Operational Reality Architecture (ORA™) · Accountability Governance

Architecture (AGA™) · AI Governance Architecture (AIG®) · Cognitive

Governance Intelligence Architecture (CLIA®) · Memory Governance

Intelligence Architecture (MGIA™) · Autonomous Systems Governance

Architecture (ASGA™)

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Ownership Integrity

Core Question

Who legitimately owns the governed identity?

Canonical Definition

Ownership Integrity Standard (OWIS) defines the structural conditions

under which ownership of a governed identity remains legitimate,

attributable, verifiable, transferable, and continuously governable

throughout the complete identity lifecycle.

OWIS governs ownership integrity.

The standard establishes the governance conditions required to ensure

that ownership of every governed identity remains clearly established,

continuously verifiable, and protected against unauthorized claims,

conflicts, or unlawful transfer.

Governed identity requires legitimate ownership.

Governance preserves that ownership.

OWIS governs that ownership.

Governance Flow Position

Origin → Identity → **Ownership** → Authority → Permission →
Responsibility → Provenance → Transfer → Continuity → Auditability

Standard Abstract

Origin establishes where identity begins.

Identity establishes what exists.

Ownership establishes to whom the governed identity
legitimately belongs.

Without governed ownership:

- ownership cannot be proven,
- ownership conflicts emerge,
- authority loses legitimacy,
- permissions become unreliable,
- accountability becomes uncertain.

OWIS establishes the governance conditions required for trustworthy
ownership throughout the complete identity lifecycle.

Operational Role

Ownership Integrity Standard provides the governance layer responsible
for establishing, validating, preserving, transferring, and protecting
legitimate ownership of governed identities.

Its role is to ensure that ownership remains continuously
attributable, verifiable, and governance-valid.

Operational Space

OWIS governs:

- ownership assignment,
 - ownership validation,
 - shared ownership,
 - ownership conflict resolution,
 - ownership evidence,
 - governed ownership,
-

- ownership continuity,
- trustworthy ownership governance.

This governed space ensures that ownership remains legitimate and continuously governable throughout the complete identity lifecycle.

Why This Standard Exists

A governed identity may exist without being used.

It cannot participate in governance without legitimate ownership.

OWIS exists because Ownership Integrity represents the **third governable space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

Scope

This standard may be applied across:

- AI identities,
 - autonomous agents,
 - robotics,
 - digital assets,
 - enterprise identities,
 - human digital identities,
 - organizations,
 - public-sector identity systems,
 - critical infrastructure,
 - future intelligent ecosystems.
-

Relationship to Other OOF® Architectures

OWIS governs ownership integrity.

It interoperates with:

- **GOA™** for governance principles,
- **ORA™** for operational reality,
- **AGA™** for accountability,
- **AIG®** for behavioral governance,
- **CLIA®** for cognition,
- **MGIA™** for memory governance,
- **ASGA™** for autonomous operational governance.

Together these architectures ensure that ownership remains legitimate,

attributable, continuously verifiable, and protected throughout the complete identity lifecycle.

Foundational Principle

Trustworthy ownership begins with trustworthy identity. Every governed identity must have ownership that remains legitimate, attributable, verifiable, and continuously governable.

Canonical Closing Statement

Identity answers what exists. Ownership answers to whom it belongs. Ownership Integrity establishes the governance foundation that enables every governed identity to remain under legitimate ownership throughout its complete lifecycle.

Module Architecture

→ Ownership Assignment Module (OOAM)

→ Ownership Validation Module (OVAM)

→ Shared Ownership Module (OSOM)

→ Ownership Conflict Resolution Module (OCRM)

→ Ownership Evidence Module (OOEM)
