

About Provenance Integrity Standard (PRIS)

Governing Provenance Integrity

Provenance Integrity Standard (PRIS) defines the governance conditions under which the provenance of a governed identity remains authentic, complete, traceable, verifiable, evidence-supported, and continuously governable throughout the complete identity lifecycle.

Every governed identity creates a history.

Every governance action becomes part of that history.

PRIS governs this identity governance space.

What Is Provenance Integrity?

Provenance integrity is the governed condition in which the complete history of a governed identity remains authentic, continuously traceable, independently verifiable, evidence-supported, and preserved throughout the complete identity lifecycle.

It enables organizations to reconstruct identity history, verify governance events, preserve evidence, establish trusted provenance chains, and ensure that every significant lifecycle event remains permanently attributable.

Canonical Definition

Provenance Integrity Standard (PRIS) defines the structural conditions under which the provenance of a governed identity remains authentic, complete, traceable, verifiable, evidence-supported, and continuously governable throughout the complete identity lifecycle.

Why PRIS Exists

Identity is more than its current state.

Trust also depends on knowing how that identity reached its present form.

Without governed provenance, history becomes fragmented, evidence disappears, attribution weakens, and governance confidence declines.

PRIS exists because Provenance Integrity represents the **seventh governable space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

What PRIS Governs

PRIS governs the structural conditions under which provenance remains:

- authentic,
- complete,
- traceable,
- verifiable,
- evidence-supported,
- governable.

Rather than governing databases, blockchain technologies, or historical storage mechanisms, PRIS governs the governance conditions required for trustworthy provenance integrity.

Architectural Position

Provenance Integrity Standard serves as the **seventh governance space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

It establishes the governance foundation that preserves the complete lifecycle history of a governed identity before transfers occur, continuity is maintained, and auditability is established.

Without governed provenance, trustworthy identity governance cannot be independently verified.

Canonical Closing Statement

Trust grows when history remains visible. Provenance Integrity ensures that every governed identity carries a complete, verifiable, and continuously governable record of how it became what it is throughout the complete identity lifecycle.
