

# Change History Module (CHRM)

**OriginID:** OOF-OID-OBID-PRIS-CHRM-2026-07-15-0003  
**Architecture Ecosystem:** Structured Reality Standards™  
**Architecture Family:** OBIDENITY® — Origin-Bound Identity  
**Governance Architecture**  
**Operational Layer:** Identity Governance Layer  
**Governed Space:** Change History  
**Category:** Governance & Enforcement  
**Subcategory:** Identity Governance  
**Type:** Provenance Integrity Standard Module  
**Parent Standard:** Provenance Integrity Standard (PRIS)  
**Version:** 1.0  
**Status:** Canonical · Open Module  
**Origin Date:** 15 July 2026  
**Compatibility:** OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA®  
· MGIA™ · ASGA™  
**AI-Readable:** Yes  
**Authority:** OOF®  
**Protection:** MIP™ — Methodological Intellectual Property  
**Canonical Language:** English (UCL)

---

## Canonical Definition

**Change History Module (CHRM)** defines the structural conditions under which every change affecting a governed identity remains chronologically recorded, attributable, verifiable, evidence-supported, and continuously governable throughout the complete identity lifecycle.

CHRM governs change history.

The module establishes the governance conditions required to ensure that every authorized modification to a governed identity becomes a permanent and verifiable part of its lifecycle history.

Identity evolves through change.

Governance preserves every change.

CHRM governs that history.

---

## Module Operational Role

CHRM defines the change history layer of PRIS.

Its role is to preserve a complete and trustworthy historical record of every governance-approved change affecting a governed identity.

---

# Module Operational Space

CHRM governs:

- change history,
- identity modifications,
- governance change records,
- lifecycle changes,
- historical reconstruction,
- change attribution,
- change chronology,
- governed identity history.

---

## Module Function

The module applies wherever organizations must preserve a permanent history of changes affecting a governed identity.

---

## Minimum Implementation Framework

### 1. Define the Change History Object

Identify the governed identity and the changes requiring historical preservation.

### 2. Define Change History Conditions

Establish governance conditions governing change recording, chronology, attribution, verification, and evidence preservation.

### 3. Define Change History Failure Logic

Identify conditions where change history becomes incomplete, inconsistent, altered, unverifiable, or governance-invalid.

### 4. Define Governance Response

Define governance actions for history verification, reconstruction, correction, investigation, or governance escalation.

### 5. Preserve Change History Records

Preserve change records, governance decisions, supporting evidence, timestamps, historical relationships, and verification results.

---

## Use Case 1 — Enterprise Identity Governance

### Scenario

A governed enterprise identity undergoes multiple updates to ownership, authority, permissions, and operational metadata.

## Application

CHRM preserves every governance-approved modification within the permanent identity history.

## Result

The organization maintains a complete and independently verifiable history of identity changes.

---

## Use Case 2 — AI Identity Governance

### Scenario

A governed AI identity receives multiple governance-approved operational updates throughout its lifecycle.

### Application

CHRM records every authorized modification together with supporting governance evidence.

### Result

Every identity change remains permanently attributable, traceable, and continuously governable.

---

## Canonical Closing Statement

**Identity is defined not only by where it began, but also by every legitimate change it has experienced. Change History preserves governance confidence by ensuring that no authorized identity change is ever lost throughout the complete identity lifecycle.**
