

Event Traceability Module (ETRM)

OriginID: OOF-OID-OBID-PRIS-ETRM-2026-07-12-0002
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: OBIDENITY® — Origin-Bound Identity
Governance Architecture
Operational Layer: Identity Governance Layer
Governed Space: Event Traceability
Category: Governance & Enforcement
Subcategory: Identity Governance
Type: Provenance Integrity Standard Module
Parent Standard: Provenance Integrity Standard (PRIS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 12 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA®
· MGIA™ · ASGA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Event Traceability Module (ETRM) defines the structural conditions under which events associated with a governed identity remain chronologically traceable, attributable, verifiable, evidence-supported, and continuously governable throughout the complete identity lifecycle.

ETRM governs event traceability.

The module establishes the governance conditions required to ensure that every significant event affecting a governed identity can be reconstructed through trusted governance records and supporting evidence.

Every identity creates events.

Governance preserves their traceability.

ETRM governs that traceability.

Module Operational Role

ETRM defines the event traceability layer of PRIS.

Its role is to preserve a complete and verifiable record of governance-relevant events throughout the lifecycle of a

governed identity.

Module Operational Space

ETRM governs:

- event traceability,
 - governance events,
 - lifecycle event tracking,
 - chronological event history,
 - governance records,
 - event attribution,
 - event verification,
 - identity event history.
-

Module Function

The module applies wherever organizations must preserve and reconstruct governance-relevant events associated with a governed identity.

Minimum Implementation Framework

1. Define the Event Object

Identify the governance events requiring lifecycle traceability.

2. Define Traceability Conditions

Establish governance conditions governing event recording, sequencing, attribution, verification, and evidence preservation.

3. Define Traceability Failure Logic

Identify conditions where events become missing, incomplete, inconsistent, unverifiable, or governance-invalid.

4. Define Governance Response

Define governance actions for event reconstruction, verification, investigation, correction, or governance escalation.

5. Preserve Event Records

Preserve event history, governance decisions, supporting evidence, timestamps, and event relationships.

Use Case 1 — Enterprise Identity Governance

Scenario

A strategic enterprise identity undergoes multiple governance changes over several years.

Application

ETRM records every governance event in chronological order and preserves complete traceability.

Result

The organization can independently reconstruct the complete governance history of the identity.

Use Case 2 — AI Identity Lifecycle

Scenario

A governed AI identity evolves through multiple operational updates, authority changes, and permission modifications.

Application

ETRM preserves every governance-relevant event throughout the identity lifecycle.

Result

The complete event history remains transparent, verifiable, and continuously governable.

Canonical Closing Statement

History is built one event at a time. Event Traceability preserves governance confidence by ensuring that every significant event remains permanently connected to the identity it helped shape throughout the complete identity lifecycle.
