

# Provenance Verification Module (PVAM)

**OriginID:** OOF-OID-OBID-PRIS-PVAM-2026-07-15-0005  
**Architecture Ecosystem:** Structured Reality Standards™  
**Architecture Family:** OBIDENTITY® — Origin-Bound Identity  
**Governance Architecture**  
**Operational Layer:** Identity Governance Layer  
**Governed Space:** Provenance Verification  
**Category:** Governance & Enforcement  
**Subcategory:** Identity Governance  
**Type:** Provenance Integrity Standard Module  
**Parent Standard:** Provenance Integrity Standard (PRIS)  
**Version:** 1.0  
**Status:** Canonical · Open Module  
**Origin Date:** 15 July 2026  
**Compatibility:** OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA®  
· MGIA™ · ASGA™  
**AI-Readable:** Yes  
**Authority:** OOF®  
**Protection:** MIP™ — Methodological Intellectual Property  
**Canonical Language:** English (UCL)

---

## Canonical Definition

**Provenance Verification Module (PVAM)** defines the structural conditions under which the provenance of a governed identity is verified, authenticated, validated, evidence-supported, and continuously governable throughout the complete identity lifecycle.

PVAM governs provenance verification.

The module establishes the governance conditions required to ensure that the complete provenance of a governed identity can be independently verified using trusted governance records, lifecycle history, and supporting evidence.

Provenance creates trust.

Verification confirms that trust.

PVAM governs that verification.

---

## Module Operational Role

PVAM defines the provenance verification layer of PRIS.

Its role is to independently verify the authenticity, continuity, and integrity of the provenance associated with a governed identity.

---

# Module Operational Space

PVAM governs:

- provenance verification,
- provenance authentication,
- governance verification,
- identity history verification,
- evidence validation,
- lifecycle verification,
- provenance integrity,
- trusted provenance assurance.

---

## Module Function

The module applies wherever organizations must independently verify the provenance of a governed identity before governance decisions are made.

---

## Minimum Implementation Framework

### 1. Define the Provenance Verification Object

Identify the governed identity and the provenance requiring independent verification.

### 2. Define Verification Conditions

Establish governance conditions governing provenance validation, evidence requirements, historical consistency, authenticity, and governance approval.

### 3. Define Verification Failure Logic

Identify conditions where provenance becomes unverifiable, incomplete, inconsistent, disputed, unsupported by evidence, or governance-invalid.

### 4. Define Governance Response

Define governance actions for verification, investigation, evidence review, correction, rejection, or governance escalation.

**5. Preserve Verification Records** Preserve verification results, governance decisions, supporting evidence, provenance history, review documentation, and audit records.

---

## Use Case 1 — Enterprise Identity Governance

### Scenario

An organization must verify the complete provenance of a strategic enterprise identity before approving a governance transfer.

## Application

PVAM independently verifies the identity's lifecycle history and supporting governance evidence.

## Result

Governance decisions are based on authenticated and verifiable provenance.

---

## Use Case 2 — Cross-Platform AI Identity

### Scenario

A governed AI identity operates across multiple platforms and jurisdictions before being integrated into a new governance environment.

### Application

PVAM verifies the complete provenance across all participating governance systems.

### Result

The identity enters the new governance environment with independently verified provenance and preserved governance trust.

---

## Canonical Closing Statement

**Provenance becomes trustworthy only when it can be independently verified. Provenance Verification preserves governance confidence by confirming that the complete history of a governed identity remains authentic, evidence-supported, and continuously governable throughout the complete identity lifecycle.**

---
