

Provenance Integrity Standard (PRIS)

OriginID: OOF-OID-OBID-PRIS-2026-07-12-0007

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: OBIDENTITY® — Origin-Bound Identity

Governance Architecture

Operational Layer: Identity Governance Layer

Category: Governance & Enforcement

Subcategory: Identity Governance

Type: Parent Standard

Governed Space: Identity Provenance

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 12 July 2026

Compatibility: OOF Methodology OS · Governance Architecture (GOA™) ·

Operational Reality Architecture (ORA™) · Accountability Governance

Architecture (AGA™) · AI Governance Architecture (AIG®) · Cognitive

Governance Intelligence Architecture (CLIA®) · Memory Governance

Intelligence Architecture (MGIA™) · Autonomous Systems Governance

Architecture (ASGA™)

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Identity Provenance

Core Question

Can the complete history of a governed identity be proven?

Canonical Definition

Provenance Integrity Standard (PRIS) defines the structural conditions under which the provenance of a governed identity remains authentic, complete, traceable, verifiable, evidence-supported, and continuously governable throughout the complete identity lifecycle.

PRIS governs identity provenance.

The standard establishes the governance conditions required to ensure that every significant event, relationship, modification, transfer, and governance decision contributing to the history of a governed identity remains permanently attributable and

independently verifiable.

Identity has an origin.

Identity creates a history.

PRIS governs that history.

Governance Flow Position

Origin → Identity → Ownership → Authority → Permission →
Responsibility → **Provenance** → Transfer → Continuity → Auditability

Standard Abstract

A governed identity accumulates history throughout its lifecycle.

Every governance action contributes to its provenance.

Without governed provenance:

- identity history becomes fragmented,
- governance evidence may disappear,
- attribution becomes unreliable,
- historical trust deteriorates,
- governance reconstruction becomes impossible.

PRIS establishes the governance conditions required for trustworthy, continuous, and independently verifiable identity provenance.

Operational Role

Provenance Integrity Standard provides the governance layer responsible for governing how the history of a governed identity is created, preserved, reconstructed, verified, and continuously governed.

Its role is to ensure that the complete provenance of every governed identity remains authentic, traceable, evidence- supported, and governance-approved.

Operational Space

PRIS governs:

- provenance chains,
 - event traceability,
 - identity history,
 - governance events,
 - evidence preservation,
 - provenance verification,
-

- historical integrity,
- identity provenance.

This governed space ensures that provenance remains continuously compatible with trustworthy identity governance.

Why This Standard Exists

Trustworthy identity requires more than knowing what an identity is today.

Governance must also preserve how that identity became what it is.

Without governed provenance, trust cannot be independently reconstructed.

PRIS exists because Identity Provenance represents the **seventh governable space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

Scope

This standard may be applied across:

- AI identities,
- digital identities,
- human identities,
- enterprise identity platforms,
- autonomous agents,
- robotics,
- digital assets,
- organizational identity systems,
- public-sector identity infrastructures,
- cross-platform identity ecosystems.

Relationship to Other OOF® Architectures

PRIS governs identity provenance.

It interoperates with:

- **GOA™** for governance integrity,
- **ORA™** for operational history,
- **AGA™** for accountability,
- **AIG®** for behavioral evidence,
- **CLIA®** for cognitive traceability,
- **MGIA™** for memory governance,
- **ASGA™** for autonomous operational history.

Together these architectures ensure that identity provenance remains authentic, traceable, evidence-supported, and continuously governable throughout the complete identity lifecycle.

Foundational Principle

Trustworthy identity requires trustworthy provenance. Every governed identity must preserve a complete, verifiable, and continuously governable history throughout its complete lifecycle.

Canonical Closing Statement

Identity is trusted not only because it exists, but because its history can be proven. Provenance Integrity preserves governance confidence by ensuring that every governed identity remains permanently connected to its authentic and verifiable lifecycle history.
