

About Responsibility Integrity Standard (RIS)

Governing Responsibility Integrity

Responsibility Integrity Standard (RIS) defines the governance conditions under which responsibility associated with a governed identity remains legitimate, attributable, verifiable, continuous, and continuously governable throughout the complete identity lifecycle.

Authority determines who may act.

Permissions determine what actions are permitted.

Responsibility determines who remains answerable for those actions.

RIS governs this identity governance space.

What Is Responsibility Integrity?

Responsibility integrity is the governed condition in which responsibility associated with a governed identity remains clearly assigned, continuously attributable, independently verifiable, preserved across governance changes, and compatible with governance throughout the complete identity lifecycle.

It enables organizations to assign responsibility, coordinate shared responsibilities, preserve responsibility continuity, attribute governance consequences, and ensure that every governed identity remains connected to accountable participants.

Canonical Definition

Responsibility Integrity Standard (RIS) defines the structural conditions under which responsibility associated with a governed identity remains legitimate, attributable, verifiable, continuous, and continuously governable throughout the complete identity lifecycle.

Why RIS Exists

Governance cannot exist without responsibility.

Every governance action produces accountable participants.

Without governed responsibility, accountability becomes fragmented, governance obligations become unclear, and identity governance loses trust and continuity.

RIS exists because Responsibility Integrity represents the **sixth governable space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

What RIS Governs

RIS governs the structural conditions under which responsibility remains:

- legitimate,
- attributable,
- verifiable,
- continuous,
- traceable,
- governable.

Rather than governing legal liability or organizational reporting structures, RIS governs the governance conditions required for trustworthy responsibility integrity.

Architectural Position

Responsibility Integrity Standard serves as the **sixth governance space** of **OBIDENTITY® — Origin-Bound Identity Governance Architecture**.

It establishes the governance foundation that connects every governed identity with accountable participants before provenance is established, transfers occur, continuity is preserved, and auditability is achieved.

Without governed responsibility, trustworthy identity governance cannot be sustained.

Canonical Closing Statement

Authority enables governance. Permissions enable action.
Responsibility preserves accountability. Responsibility Integrity ensures that every governed identity remains continuously connected to those responsible for its governance throughout the complete identity lifecycle.
