

Responsibility Continuity Module (RCTM)

OriginID: OOF-OID-OBID-RIS-RCTM-2026-07-12-0004
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: OBIDENITY® — Origin-Bound Identity
Governance Architecture
Operational Layer: Identity Governance Layer
Governed Space: Responsibility Continuity
Category: Governance & Enforcement
Subcategory: Identity Governance
Type: Responsibility Integrity Standard Module
Parent Standard: Responsibility Integrity Standard (RIS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 12 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA®
· MGIA™ · ASGA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Responsibility Continuity Module (RCTM) defines the structural conditions under which responsibility associated with a governed identity remains continuous, attributable, transferable, and continuously governable throughout the complete identity lifecycle.

RCTM governs responsibility continuity.

The module establishes the governance conditions required to ensure that responsibility remains continuously preserved despite organizational, operational, technological, or lifecycle changes.

Participants may change.

Responsibility must remain continuous.

RCTM governs that continuity.

Module Operational Role

RCTM defines the responsibility continuity layer of RIS.

Its role is to preserve uninterrupted governance responsibility throughout every stage of the governed identity lifecycle.

Module Operational Space

RCTM governs:

- responsibility continuity,
- accountable continuity,
- governance continuity,
- responsibility preservation,
- lifecycle responsibility,
- continuous accountability,
- responsibility succession,
- governance responsibility continuity.

Module Function

The module applies wherever responsibility must remain continuously preserved despite changes affecting a governed identity.

Minimum Implementation Framework

1. Define the Responsibility Continuity Object

Identify the governed identity and the responsibilities requiring continuous governance.

2. Define Continuity Conditions

Establish governance conditions governing responsibility preservation, succession, transfer, replacement, and lifecycle continuity.

3. Define Continuity Failure Logic

Identify conditions where responsibility becomes interrupted, abandoned, fragmented, inconsistent, or governance-invalid.

4. Define Governance Response

Define governance actions for responsibility succession, reassignment, restoration, governance intervention, or continuity review.

5. Preserve Continuity Records

Preserve responsibility history, succession records, governance decisions, supporting evidence, and accountability documentation.

Use Case 1 — Enterprise Identity Governance

Scenario

The governance responsibility for a strategic enterprise identity is transferred to a successor after an organizational restructuring.

Application

RCTM preserves uninterrupted governance responsibility throughout the transition.

Result

Governance continuity remains intact without creating responsibility gaps.

Use Case 2 — Long-Term AI Identity Governance

Scenario

A governed AI identity operates for many years while administrators, ownership structures, and operational teams change.

Application

RCTM preserves continuous responsibility across every governance transition.

Result

Responsibility remains attributable, continuous, and continuously governable throughout the complete identity lifecycle.

Canonical Closing Statement

Trustworthy governance is measured not only by who is responsible today, but by whether responsibility is never lost tomorrow.

Responsibility Continuity preserves uninterrupted accountability throughout the complete identity lifecycle.
