

Asset Transfer Module (ASTM)

OriginID: OOF-OID-OBID-TIS-ASTM-2026-07-15-0004

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: OBIDENITY® — Origin-Bound Identity

Governance Architecture

Operational Layer: Identity Governance Layer

Governed Space: Asset Transfer

Category: Governance & Enforcement

Subcategory: Identity Governance

Type: Transfer Integrity Standard Module

Parent Standard: Transfer Integrity Standard (TIS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 15 July 2026

Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA®
· MGIA™ · ASGA™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition

Asset Transfer Module (ASTM) defines the structural conditions under which assets associated with a governed identity are transferred while preserving ownership integrity, provenance, accountability, continuity, and continuous governability throughout the complete identity lifecycle.

ASTM governs asset transfer.

The module establishes the governance conditions required to ensure that every asset transfer remains legitimate, traceable, verifiable, and governance-approved without compromising the integrity of the governed identity.

Assets may be transferred.

Governance relationships must remain intact.

ASTM governs that transfer.

Module Operational Role

ASTM defines the asset transfer layer of TIS.

Its role is to preserve governance integrity whenever governed assets

are transferred between legitimate participants.

Module Operational Space

ASTM governs:

- asset transfer,
 - governed asset migration,
 - ownership-linked assets,
 - asset transition,
 - asset provenance,
 - governance-approved transfer,
 - asset continuity,
 - governed asset movement.
-

Module Function

The module applies wherever assets linked to a governed identity must be transferred between legitimate governance participants.

Minimum Implementation Framework

1. Define the Asset Transfer Object

Identify the governed asset and the governed identity associated with the transfer.

2. Define Transfer Conditions

Establish governance conditions governing authorization, ownership verification, provenance preservation, continuity, and governance approval.

3. Define Transfer Failure Logic

Identify conditions where asset transfer becomes unauthorized, incomplete, inconsistent, unverifiable, disputed, or governance-invalid.

4. Define Governance Response

Define governance actions for approval, suspension, correction, investigation, rejection, or governance escalation.

5. Preserve Transfer Records

Preserve asset transfer records, governance approvals, supporting evidence, provenance documentation, and transfer history.

Use Case 1 — Enterprise Digital Asset

Scenario

A governed software license, together with its governed identity, is transferred to a newly acquired business entity.

Application

ASTM governs the transfer while preserving ownership, provenance, and governance continuity.

Result

The asset remains legitimately governed throughout the ownership transition.

Use Case 2 — AI Identity Asset Governance

Scenario

A governed AI identity transfers associated models, credentials, and operational assets to a successor organization.

Application

ASTM validates and governs the complete asset transfer process.

Result

The transfer preserves governance integrity, provenance, and continuous trust across the complete identity lifecycle.

Canonical Closing Statement

Assets derive lasting trust from the governance that follows them.

Asset Transfer preserves that trust by ensuring that every governed asset moves together with its legitimate governance relationships throughout the complete identity lifecycle.
