

Ownership Transfer Module (OTRM)

OriginID: OOF-OID-OBID-TIS-OTRM-2026-07-15-0001
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: **OBIDENITY® — Origin-Bound Identity**
Governance Architecture
Operational Layer: Identity Governance Layer
Governed Space: Ownership Transfer
Category: **Governance & Enforcement**
Subcategory: Identity Governance
Type: Transfer Integrity Standard Module
Parent Standard: Transfer Integrity Standard (TIS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 15 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA®
· MGIA™ · ASGA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Ownership Transfer Module (OTRM) defines the structural conditions under which ownership of a governed identity is transferred while preserving legitimacy, provenance, accountability, continuity, and continuous governability throughout the complete identity lifecycle.

OTRM governs ownership transfer.

The module establishes the governance conditions required to ensure that every ownership transfer remains authorized, verifiable, traceable, and governance-approved before ownership changes become effective.

Ownership may change.

Identity integrity must not.

OTRM governs that transfer.

Module Operational Role

OTRM defines the ownership transfer layer of TIS.

Its role is to govern the legitimate transfer of ownership while preserving the complete governance history of the governed identity.

Module Operational Space

OTRM governs:

- ownership transfer,
 - ownership succession,
 - ownership reassignment,
 - governance-approved ownership change,
 - ownership verification,
 - ownership continuity,
 - transfer authorization,
 - ownership governance.
-

Module Function

The module applies wherever ownership of a governed identity must be transferred between legitimate participants.

Minimum Implementation Framework

1. Define the Ownership Transfer Object

Identify the governed identity and the ownership relationship requiring transfer.

2. Define Transfer Conditions

Establish governance conditions governing ownership authorization, verification, acceptance, traceability, and governance approval.

3. Define Transfer Failure Logic

Identify conditions where ownership transfer becomes unauthorized, disputed, incomplete, unverifiable, or governance- invalid.

4. Define Governance Response

Define governance actions for approval, rejection, suspension, investigation, correction, or governance escalation.

5. Preserve Transfer Records

Preserve ownership transfer records, governance decisions, supporting evidence, provenance updates, and transfer history.

Use Case 1 — Enterprise Digital Identity

Scenario

A strategic enterprise identity is transferred to a new legal owner following a corporate acquisition.

Application

OTRM governs the ownership transition and preserves the complete governance history.

Result

Ownership changes without compromising identity integrity or governance continuity.

Use Case 2 — AI Identity Governance

Scenario

Ownership of a governed AI identity is transferred from one organization to another.

Application

OTRM verifies the legitimacy of the transfer and preserves the complete provenance chain.

Result

The AI identity retains continuous governance integrity throughout the ownership transition.

Canonical Closing Statement

Ownership may legitimately change, but governance trust must never restart. Ownership Transfer preserves identity integrity by ensuring that every new owner inherits a governed identity with its complete history, legitimacy, and continuity intact throughout the complete identity lifecycle.
