

OBIDENTITY™ — Business Model & Licensing

How Identity Becomes a New Economic Layer

The Shift

Digital systems were built on:

- platforms
- accounts
- access

The next layer is built on:

identity

Not platform-owned identity,
but **origin-bound, user-controlled identity**.

What Becomes Monetizable

OBIDENTITY™ enables identity to function as:

- a controlled asset
- a persistent presence
- a usable interaction layer

This creates a new category:

Identity-Based Economy

Core Business Model

1. Open Standard (Adoption Layer)

OBIDENTITY™ is open.

- anyone can implement it
- anyone can declare compatibility
- no barrier to entry

purpose:
rapid adoption and ecosystem growth.

2. Compatibility Licensing (Trust Layer)

Organizations may obtain the right to use:

- "OBIDENTITY™ Compatible"
- structured identity methodology
- governance rules

Value:

- trust
 - positioning
 - differentiation
-

3. Identity-Based Products (Application Layer)

Companies build products on identity:

- AI identity agents
- identity-based interaction systems
- identity-driven services

Identity becomes:

- a service
 - an experience
 - a product
-

New Business Opportunities

1. AI Identity Services

AI agents with defined identity:

- verified representation
 - controlled interaction
 - identity-bound communication
-

2. Identity Licensing

Identity may be:

- licensed for interaction
 - licensed for representation
 - licensed for experience
-

3. Identity-Based Platforms

Platforms shift from:

- user accounts

to:

- identity interaction layers
-

Identity as a Product

Users will not only create identity.

They will:

- use identity
 - interact through identity
 - access other identities
-

Examples:

- a user communicates with a known personality through identity-bound AI
 - a user trains with a motivational identity
 - a user experiences music through identity-based interaction
-

Why Companies Will Adopt

Companies face increasing risk:

- identity impersonation
- AI misuse
- loss of trust
- lack of verification

OBIDENTITY™ offers:

- structured identity layer
 - verifiable identity conditions
 - reduced risk
 - increased trust
-

Why Users Will Adopt

Users want:

- ownership of identity
 - control over representation
 - protection against misuse
 - continuity across systems
-

Strategic Position

OBIDENITY™ is not a platform.

It is:

an identity infrastructure layer

Platforms will build on it.

Revenue Streams

- compatibility licensing
 - enterprise adoption
 - identity-based services
 - verification and infrastructure (future layer)
-

Market Direction

As AI expands:

- identity becomes critical
- trust becomes scarce
- verification becomes required

OBIDENITY™ positions itself as:

the layer that defines trusted identity

Closing Statement

Identity will not be owned by platforms.

It will become the foundation of value, interaction, and trust.
