

OBIDENTITY™ — Origin-Bound Identity Standard

Category: Governance & Enforcement

Subcategory: Identity

**Minimal Standard for Non-Replicable,
Traceable, and Audit-Bound Identity**

Version: 1.0

Status: Canonical · Open Standard

Effective Date: 19 March 2026

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL™)

Canonical Definition

OBIDENTITY™ (Origin-Bound Identity) defines the minimum structural conditions under which an identity can exist as a non-replicable, traceable, and audit-verifiable entity across systems.

An identity is valid only when it is bound to a verifiable origin and maintained through continuous, non-overwriteable event history.

Base

This standard is based on the following principles:

- Identity must be anchored to a verifiable origin event
 - Identity must be unique and non-replicable
 - Identity must not be overwriteable or transferable without trace
 - Identity must remain independent of platform-specific carriers
 - Identity must be maintained through continuous event-based history
-

Core Conditions

An OBIDENTITY™-compatible identity **MUST** satisfy:

- existence of a unique identity anchor
 - binding to a defined origin event
 - continuous, append-only lifecycle
 - traceable responsibility and event history
 - ability to reconstruct identity state at any point in time
-
-

Validity Rule

If identity origin, continuity, or traceability cannot be verified:

→ the identity is considered **invalid or unknown**

Scope

This standard applies to:

- digital identities
 - AI systems and agents
 - organizations and governance entities
 - datasets and models
 - physical assets as referenced identities
-

Institutional Position

OBIDENTITY™ does not replace legal identity systems or identification documents.

It defines a structural identity layer enabling traceability, auditability, and interoperability across systems.

Structural Principle

Identity is not defined by registration.

Identity is defined by origin and continuity.

Closing Statement

An identity that cannot prove where it came from and how it evolved does not exist as a valid entity.
