

ORA™ Complete Standards & Modules Index

Operational Reality Architecture

Official Operational Reality Map for Autonomous Systems, AI Systems, Organizations, Critical Infrastructure, and Complex Operational Environments

This document serves as the official OOF® operational reality governance map and structural index used for operational reality identification, operational governance classification, operational diagnostics, operational architecture navigation, and operational problem placement across human, organizational, AI, autonomous, industrial, and cyber-physical environments.

ORA™ consists of **12 Parent Standards** and **60 Core Modules**.

Additional standards and modules may be added when new governable operational spaces are identified. However, the standards and modules listed below form the core structural backbone of ORA™.

1. Operational Reality Standard (ORS)

Governed Space: Operational Reality

Core Question: What is actually happening in operational reality?

Modules:

- OSAM — Operating State Alignment Module
- RSVM — Runtime State Visibility Module
- DBCM — Declared Behavior Comparison Module
- OBCM — Operational Boundary Continuity Module
- ODM — Operational Distortion Module

2. Operational Boundary Synchronization Standard (OBS)

Governed Space: Operational Boundaries

Core Question: Where are the operational boundaries and are they synchronized?

Modules:

- OBSM — Operational Boundary State Module
- RBM — Relationship Boundary Module
- MBCM — Multi-Agent Boundary Coordination Module
- FBGM — Federated Boundary Governance Module

3. Operational Responsibility Continuity Standard (ORCS)

Governed Space: Operational Responsibility

Core Question: Who remains operationally responsible throughout execution?

Modules:

- FREM — Fragmented Responsibility Execution Module
 - DOCM — Delegated Operational Continuity Module
 - SBCM — Synchronized Benefit Continuity Module
 - ODRM — Operational Dependency Reconstruction Module
 - CAM — Cascading Accountability Module
-

4. Operational Risk & Trust Integrity Standard (ORTIS)

Governed Space: Operational Risk & Trust

Core Question: What operational risks exist and can the system still be trusted?

Modules:

- ATRIM — Agent Trust & Risk Integrity Module
 - REM — Risk Escalation Module
 - TDM — Trust Degradation Module
 - TRM — Trust Recovery Module
 - ARCM — Autonomous Risk Classification Module
-

5. Operational Validity Continuity Standard (OVCS)

Governed Space: Operational Validity

Core Question: Does the operational state remain valid over time?

Modules:

- COVM — Continuous Operational Validity Module
 - ROAM — Realtime Operational Admissibility Module
 - EIVM — Execution Integrity Verification Module
 - COLM — Contextual Operational Legitimacy Module
 - HCSM — Historical Certification State Module
-

6. Operational Constraint Integrity Standard (OCNS)

Governed Space: Operational Constraints

Core Question: Which operational constraints must never be violated?

Modules:

- CCM — Constraint Continuity Module
 - BAIM — Bounded Autonomy Integrity Module
 - RCIM — Restriction Continuity Integrity Module
 - ACSM — Adaptive Constraint Stability Module
 - CBCIM — Consequence-Bearing Constraint Integrity Module
-

7. Operational Escalation Integrity Standard (OESIS)

Governed Space: Operational Escalation

Core Question: When and how should operational escalation occur?

Modules:

- ECM — Escalation Continuity Module
 - ELIM — Escalation Legitimacy Integrity Module
 - DECM — Distributed Escalation Coordination Module
 - EESM — Emergency Escalation Stability Module
 - CBEIM — Consequence-Bearing Escalation Integrity Module
-

8. Operational Authority Integrity Standard (OAIS)

Governed Space: Operational Authority

Core Question: Who has legitimate authority to act?

Modules:

- ACM — Authority Continuity Module
 - DAIM — Delegated Authority Integrity Module
 - EAIM — Escalation Authority Integrity Module
 - DASM — Distributed Authority Stability Module
 - CBAIM — Consequence-Bearing Authority Integrity Module
-

9. Operational Decision Integrity Standard (ODIS)

Governed Space: Operational Decision Integrity

Core Question: How are operational decisions made, justified, and preserved?

Modules:

- DCM — Decision Continuity Module
 - CBDIM — Consequence-Bearing Decision Integrity Module
 - DTM — Decision Traceability Module
 - ADSM — Adaptive Decision Stability Module
 - AADIM — Authority-Aligned Decision Integrity Module
-

10. Operational Dependency & Coordination Standard (ODCS)

Governed Space: Operational Dependencies & Coordination

Core Question: How are operational dependencies coordinated across the system?

Modules:

- DCM — Dependency Continuity Module
 - CIM — Coordination Integrity Module
 - RSCM — Runtime Coupling Stability Module
 - DECM — Delegated Execution Coordination Module
 - CDIM — Cascading Dependency Impact Module
-

11. Operational Evidence & Auditability Standard (OEAS)

Governed Space: Operational Evidence & Auditability

Core Question: Can operational actions be reconstructed, verified, and proven?

Modules:

- RECM — Runtime Evidence Continuity Module
 - AECM — Attribution Evidence Continuity Module
 - ORCM — Operational Reconstruction Capability Module
 - CTCM — Consequence Traceability Continuity Module
 - APAM — Audit Preservation & Admissibility Module
-

12. System Recovery & Continuity Standard (SRCS)

Governed Space: System Recovery & Operational Continuity

Core Question: How can operational continuity be restored after disruption?

Modules:

- RCGM — Recovery Continuity Governance Module
 - RLSCM — Rollback Legitimacy & State Management Module
 - RSCM — Recovery Synchronization & Coherence Module
 - RARM — Recovery Authority & Responsibility Module
 - RRAM — Runtime Reconstruction & Admissibility Module
-

ORA™ Architecture Summary

Parent Standards: 12

Core Modules: 60

Core Governed Spaces

- Operational Reality
 - Operational Boundaries
 - Operational Responsibility
 - Operational Risk & Trust
-

- Operational Validity
 - Operational Constraints
 - Operational Escalation
 - Operational Authority
 - Operational Decision Integrity
 - Operational Dependencies & Coordination
 - Operational Evidence & Auditability
 - System Recovery & Operational Continuity
-

ORA™ Navigation Layer

Core Questions Map

ORS → What is actually happening in operational reality?

OBS → Where are the operational boundaries
and are they synchronized?

ORCS → Who remains operationally responsible
throughout execution?

ORTIS → What operational risks exist and can the system still be
trusted?

OVCS → Does the operational state remain valid over time?

OCNS → Which operational constraints must never be violated?

OESIS → When and how should operational escalation occur?

OAIS → Who has legitimate authority to act?

ODIS → How are operational decisions made,
justified, and preserved?

ODCS → How are operational dependencies
coordinated across the system?

OEAS → Can operational actions be reconstructed,
verified, and proven?

SRCS → How can operational continuity be restored after disruption?

Architectural Position

ORA™ governs the complete operational lifecycle.

The architecture progresses:

**Operational Reality → Operational Boundaries → Operational
Responsibility → Operational Risk → Operational Validity →
Operational Constraints → Operational Escalation → Operational**

**Authority → Operational Decision → Operational Dependencies →
Operational Evidence → Operational Recovery**

Together these standards govern how operational reality remains valid throughout operational execution, coordination, governance, accountability, evidence preservation, and recovery.

Canonical Principle

ORA™ does not govern what a system intends to achieve. ORA™ governs how operational reality itself remains valid, observable, coordinated, accountable, auditable, and recoverable before, during, and after execution.
