

Origin Eco™ Standard

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-ENV-OE-2026-02-19-0001

Category: Environmental Integrity Standards (ENV)

Subcategory: Origin Eco™

Version: 1.0

Status: Canonical · Open Standard

Effective Date: 19 February 2026

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English

A. Standard Abstract

This standard defines the structural transparency conditions under which environmental origin, material composition, and production process information become visible within product and production systems.

Origin Eco™ establishes a structural environmental transparency model focused on origin disclosure, material visibility, and process traceability.

The standard does not replace environmental regulation, certification schemes, or public law.

It defines transparency conditions for environmental origin and production structure.

B. Canonical Definition

Origin Eco™ is a structural environmental integrity state in which the origin of materials, composition of inputs, and core production processes are documented and made visible within a production system.

Origin Eco™ establishes that environmental credibility begins with **transparent origin and traceable production structure.**

C. Structural Base

This standard is based on the following principles:

- Origin Transparency Principle
- Material Composition Visibility
- Production Process Traceability
- Responsibility Attribution
- Non-Substitution of Regulatory Authority

Origin Eco™ defines structural transparency conditions rather than

environmental performance metrics.

D. Structural Transparency Requirements

Systems referencing **Origin Eco™** must maintain transparent documentation of the following elements.

1. Origin Disclosure

The primary origin of materials or resources used in production must be identifiable.

Origin disclosure may include:

- own cultivation or production
- supplier origin
- regional or geographic source
- imported materials

Where applicable, the origin should allow clear distinction of sourcing pathways.

2. Material Composition Transparency

Primary materials used in production must be visible and identifiable.

Documentation should allow visibility of:

- material categories
- natural or synthetic origin
- principal inputs used in production

The objective is to establish **clear structural visibility of material composition**.

3. Production Process Traceability

Core production processes must be describable and attributable.

Process transparency includes:

- description of production stages
- responsible entity

This ensures that production structure is understandable and accountable.

E. Scope

This standard may apply to:

- agricultural products
 - herbal products
 - food products
-

- natural extracts
- raw materials
- packaging processes
- water-dependent production systems
- soil-based production systems

Origin Eco™ focuses on transparency of origin and production structure rather than certification of environmental performance.

F. Compatibility

Origin Eco™ may operate alongside other environmental transparency frameworks including:

- Water Integrity™
- Soil Integrity™
- Carbon Lifecycle Integrity™
- broader Environmental Integrity Standards

Origin Eco™ functions as a foundational element within the **Environmental Integrity Stack**.

G. Licensing & Usage

Reference use of this standard is permitted.

Implementation of Origin Eco™ within structured commercial ecosystems may require authorization under **MIP™ Methodological Intellectual Property**.

Canonical Closing Statement

Environmental integrity begins with transparent origin.
