

# PSM™ — Podcast & Streaming Module

**OOF™ Origin Open Foundation™**

Independent Methodological Authority

**Category:** AI and Interpretation

**Subcategory:** Content Origin Declaration

**Module:** Podcast & Streaming Module (PSM™)

**Type:** Declaration Module

**Standard:** Origin Declaration Standard (ODS™)

**Status:** Canonical Module

**Version:** 1.0

**Effective Date:** 17 March 2026

---

## Canonical Definition

The Podcast & Streaming Module (PSM™) defines how the origin of audio and real-time content is declared using a single, clear origin code.

The module enables immediate recognition of whether spoken or streamed content is human generated, AI generated, or undeclared.

---

## Declaration

Only one origin code may be used:

- **HGC** — Human Generated Content
- **AGC** — AI Generated Content
- **UGC** — Unknown Generated Content

---

## Usage

### Content Level (required — single code)

One origin code must be associated with the podcast episode or live stream.

Examples:

- HGC
- AGC
- UGC

### Description Level (required)

The declaration must be included in the episode description or stream metadata:

Origin: HGC  
OOF Compatible — ODS™ Standard  
<https://originopenfoundation.org>

---

## Live Content Rule

For live streaming:

- origin must be declared before or at the start of the stream
  - if origin changes during the stream, the declaration must be updated
- 

## OOF Compatibility

Content using this module may include the statement:

OOF Compatible — ODS™ Standard

A reference link to the official source is required.

---

## Use Case 1 — Live Stream Transparency

### Scenario

A creator runs live streams with human presence, AI avatars, or mixed formats.

### Application

Origin is declared at the start of the stream (HGC / AGC / UGC).

### Result

- Immediate audience clarity
  - Reduced confusion about real vs synthetic presence
  - Increased trust in live content
- 

## Use Case 2 — Podcast Distribution

### Scenario

A podcast is distributed across platforms with human or AI-generated voices.

### Application

Each episode includes origin declaration in metadata.

### Result

- Transparent content classification
  - Improved platform compliance
  - Clear differentiation in the market
- 

## Structural Principle

Real-time content does not remove the need for declaration.

---

## Closing Statement

Live or recorded, the rule remains the same.

Origin must be declared.

---
