

AI Governance Assessment™ Question Index

OOF Problem Space Intelligence Index™ (PSII™)

Assessing AI Governance Readiness, Accountability, Explainability, Oversight, Risk, and Operational Control

Artificial Intelligence is rapidly moving from experimentation into operational environments.

Organizations increasingly deploy:

- AI assistants,
- autonomous agents,
- decision-support systems,
- machine learning systems,
- AI-powered workflows,
- multi-agent environments.

As AI capabilities grow, governance requirements become increasingly important.

AI Governance Assessment™ exists to help organizations evaluate whether AI systems operate within defined governance conditions.

This Question Index™ provides a structured collection of questions designed to support AI governance assessment, accountability analysis, oversight evaluation, explainability review, risk identification, and governance readiness analysis.

The objective is not merely to evaluate AI.

The objective is to understand whether AI can operate responsibly, transparently, and governably within real-world environments.

AI Governance Foundations

Does an AI governance framework exist? Is AI governance formally documented? Are AI governance objectives clearly defined? Is governance applied consistently across AI systems? Are governance responsibilities assigned? Is governance oversight established? Can governance effectiveness be measured?

Are governance policies maintained? Is AI governance operational or theoretical? Is governance sufficient for deployment?

AI Accountability

Who is accountable for AI decisions? Who approves AI deployment? Who owns AI outcomes? Can accountability be demonstrated? Are accountability relationships documented? Are accountability gaps present? Can accountability be audited? Does accountability remain

clear during autonomous operation? Are accountability escalation paths defined? Is accountability enforceable?

Human Oversight

Does human oversight exist? Who supervises AI operations? Can humans intervene? Can AI actions be stopped? Are override mechanisms defined? Are intervention conditions documented? Can oversight effectiveness be measured? Are oversight responsibilities assigned? Does oversight remain effective at scale? Is human control preserved?

AI Explainability

Can AI decisions be explained? Can AI outputs be interpreted? Is decision logic understandable? Can explanations be reviewed? Are explanations consistent? Can explanation quality be measured? Are explanation limitations documented? Can stakeholders understand outcomes? Does explainability support trust? Is explainability sufficient for operational use?

AI Decision Governance

What decisions can AI make? Which decisions require human approval? Are decision boundaries documented? Can AI delegate decisions? Are decision rights defined? Are decision pathways traceable? Can decisions be audited? Are high-risk decisions restricted? Can decision failures be analyzed? Is decision governance effective?

AI Risk Assessment

What risks does the AI system create? Are AI risks documented? Can AI risks be measured? Are emerging risks monitored? Can AI produce harmful outcomes? Can AI be manipulated? Are operational risks understood? Are governance risks understood? Are mitigation mechanisms established? Is AI risk exposure acceptable?

AI Authority and Permissions

What authority does AI possess? Who granted that authority? Are authority limits defined? Can authority be modified? Can authority be revoked? Are permissions documented? Are permission boundaries enforced? Can authority escalation occur? Are authority conflicts possible? Is authority governance sufficient?

AI Auditability

Can AI actions be audited? Are activity records maintained? Can decisions be reconstructed? Are audit trails complete? Is evidence preserved? Can audits be performed independently? Are audit requirements documented? Can audit failures be identified? Does

Multi-Agent Governance

Does the AI interact with other agents? Are agent relationships governed? Can agent authority conflicts occur? Can agent responsibilities be identified? Are coordination rules defined? Can multi-agent decisions be traced? Are escalation mechanisms established? Are agent dependencies documented? Can multi-agent risks be assessed? Is multi-agent governance sufficient?

Future AI Governance Readiness

Is governance prepared for autonomous agents? Is governance prepared for self-improving systems? Is governance prepared for large-scale deployment? Is governance prepared for AI-human collaboration? Is governance prepared for regulatory change? Can governance evolve over time? Can governance scale with AI capability growth? Are future governance challenges understood? Is long-term AI oversight sustainable? Is the AI governance environment future-ready?

Related OOF® Service

AI Governance Assessment™

AI Governance Assessment™ helps organizations assess AI governance readiness, accountability, oversight, explainability, authority structures, auditability, operational control, and governance risks across AI systems, autonomous agents, multi-agent environments, and Human-AI ecosystems.

About the OOF Problem Space Intelligence Index™

The OOF Problem Space Intelligence Index™ (PSII™) is a growing collection of structured questions designed to help identify, understand, classify, and investigate problems before searching for solutions.

Questions are organized into categories, clusters, and problem environments to improve clarity, analysis, governance, and decision-making.

The objective is not merely to provide answers.

The objective is to ensure that the right questions are being asked.
