

Governance Architecture Analysis™ Question Index

OOF Problem Space Intelligence Index™ (PSII™)

Analyzing Governance Structures, Dependencies, Gaps, Readiness, and Operational Governance Conditions

Organizations often invest heavily in technology, processes, compliance, and operations.

However, many failures originate not from technology itself, but from governance weaknesses.

Governance Architecture Analysis™ exists to help organizations understand how governance operates, where governance gaps exist, how authority flows, where accountability resides, and whether governance structures are capable of supporting operational objectives.

This Question Index™ provides a structured collection of questions designed to support governance assessment, governance mapping, governance readiness evaluation, and governance architecture analysis.

The objective is not merely to evaluate governance.

The objective is to understand whether governance is capable of producing reliable outcomes.

Governance Structure

Does a governance structure exist? Is governance formally documented? Is governance consistently applied? Is governance understandable? Can governance relationships be identified? Are governance layers visible? Are governance boundaries defined? Is governance architecture coherent? Does governance support operational objectives? Can governance be independently reviewed?

Governance Purpose

Why does governance exist? What objectives does governance support? Does governance align with organizational goals? Are governance outcomes measurable? Does governance reduce risk? Does governance improve accountability? Does governance support decision-making? Does governance support operational stability? Is governance purpose clearly communicated? Is governance fulfilling its intended role?

Authority Analysis

Who holds authority? How is authority assigned? Is authority documented? Are authority boundaries clear? Can authority be delegated? Is authority traceable? Are authority conflicts present? Are authority limitations defined? Can authority decisions be

reviewed? Is authority functioning effectively?

Accountability Analysis

Who is accountable? Is accountability clearly assigned? Can accountability be demonstrated? Are accountability relationships documented? Are accountability gaps present? Are accountability conflicts present? Does accountability support governance objectives? Can accountability be audited? Are accountability failures visible? Is accountability operating effectively?

Governance Dependencies

What governance dependencies exist? Does governance depend on specific individuals? Does governance depend on technology? Does governance depend on external organizations? Does governance depend on regulatory conditions? Are dependencies documented? Can dependencies create governance risks? Are hidden dependencies present? Can dependencies be mapped? Are dependencies understood?

Governance Gaps

Are governance gaps present? Are responsibilities undefined? Are authority relationships unclear?

Are accountability mechanisms missing? Are escalation pathways incomplete? Are governance controls ineffective? Are governance roles ambiguous? Can governance weaknesses be demonstrated? Do governance gaps create risk? Can governance gaps be prioritized?

Decision-Making Governance

How are decisions made? Who approves decisions? Are decision rights documented? Are decision pathways traceable? Can decisions be audited? Are decision responsibilities clear? Are decision conflicts common? Does governance support effective decisions? Are decision failures analyzed? Is decision governance sufficient?

Governance Risk

What governance risks exist? Are governance risks documented? Can governance failures be anticipated? Are governance controls effective? Can governance risks be measured? Are governance risks increasing? Are governance risks systemic? Can governance risks be mitigated? Are governance incidents recorded? Is governance resilience sufficient?

Governance Readiness

Is governance prepared for growth? Is governance prepared for change? Is governance prepared for AI systems? Is governance

prepared for automation? Is governance prepared for regulatory change? Is governance scalable? Can governance adapt to new environments? Are future governance requirements understood? Is governance maturity sufficient? Is governance ready for future challenges?

Governance Architecture Intelligence

Does governance architecture support organizational objectives? Are governance relationships visible? Can governance complexity be managed? Are governance layers aligned? Does governance create operational clarity? Can governance support accountability?

Can governance support trust? Can governance support resilience? Does governance improve outcomes? Is governance architecture fit for purpose?

Related OOF® Service

Governance Architecture Analysis™

Governance Architecture Analysis™ helps organizations evaluate governance structures, authority relationships, accountability conditions, governance gaps, dependencies, risks, and readiness across operational, institutional, technological, and AI-enabled environments.

About the OOF Problem Space Intelligence Index™

The OOF Problem Space Intelligence Index™ (PSII™) is a growing collection of structured questions designed to help identify, understand, classify, and investigate problems before searching for solutions.

Questions are organized into categories, clusters, and problem environments to improve clarity, analysis, governance, and decision-making.

The objective is not merely to provide answers.

The objective is to ensure that the right questions are being asked.
